| Earth, Sun, and Moon – In this unit, students demonstrate and model the positions of the Earth rotating on its axis to predict the sequences in the lunar cycle. Students communicate the position of the moon and sun and relate this phenomenon's effect on ocean tides.   |           |                        |                                                                                                                                                                                                                                                                                                              |    |                   |
