Hyperbolic Metric Spaces Tushar Das, David Simmons, Mariusz Urbański, 2017-04-14 This book presents the foundations of the theory of groups and semigroups acting isometrically on Gromov hyperbolic metric spaces Particular emphasis is paid to the geometry of their limit sets and on behavior not found in the proper setting The authors provide a number of examples of groups which exhibit a wide range of phenomena not to be found in the finite dimensional theory The book contains both introductory material to help beginners as well as new research results and closes with a list of attractive unsolved problems

Theory, Algebra, and Geometry Deirdre Haskell, Anand Pillay, Charles Steinhorn, 2000-07-03 Model theory has made substantial contributions to semialgebraic subanalytic p -adic rigid and diophantine geometry These applications range from a proof of the rationality of certain Poincare series associated to varieties over p -adic fields to a proof of the Mordell Lang conjecture for function fields in positive characteristic In some cases such as the latter it is the most abstract aspects of model theory which are relevant This book originally published in 2000 arising from a series of introductory lectures for graduate students provides the necessary background to understanding both the model theory and the mathematics behind these applications The book is unique in that the whole spectrum of contemporary model theory stability simplicity of minimality and variations is covered and diverse areas of geometry algebraic diophantine real analytic p -adic and rigid are introduced and discussed all by leading experts in their fields Open Problems in the Geometry and Analysis of Banach Spaces Antonio J. Guirao, Vicente Montesinos, Václav Zizler, 2016-07-26 This is an collection of some easily formulated problems that remain open in the study of the geometry and analysis of Banach spaces Assuming the reader has a working familiarity with the basic results of Banach space theory the authors focus on concepts of basic linear geometry convexity approximation optimization differentiability renormings weak compact generating Schauder bases and biorthogonal systems fixed points topology and nonlinear geometry The main purpose of this work is to help in convincing young researchers in Functional Analysis that the theory of Banach spaces is a fertile field of research full of interesting open problems Inside the Banach space area the text should help expose young researchers to the depth and breadth of the work that remains and to provide the perspective necessary to choose a direction for further study Some of the problems are longstanding open problems some are recent some are more important and some are only local problems Some would require new ideas some may be resolved with only a subtle combination of known facts Regardless of their origin or longevity each of these problems documents the need for further research in this area Topology, Geometry, and Dynamics: V.
