Assessment Instruments Robert J. McCaffrey, Kevin Duff, Holly James Westervelt, 2013-11-11 The impetus for this volume began with our research in the 1980 s involving serial neuropsychological evaluation with various patient populations At that time reports on the practice effects associated with routinely utilized clinical neuropsychological instruments were sparse While test retest data were available for almost all assessment instruments this was usually in the form of correlation

coefficients and not changes in mean performance between or across assessment periods see McCaffrey Westervelt 1995 for a detailed discussion of these and related issues Clinical neuropsychological practitioners had few guidelines to assist them in determining if a change in a patient's performance across assessments was due to an intervention maturation practice effects or a combination of factors This volume represents our efforts at reviewing the literature between 1970 and 1998 and extracting the reported information on practice effects The tables include the assessment instrument used information on the subject patient groups the sample size n gender age intervention interval between the assessments scores at both assessment points and the citation Those studies that reported data on more than two assessment points are indicated by a notation however any data beyond the second assessment are not reported and the interested reader should refer to the original article The tables are arranged alphabetically for the most widely used assessment instruments Those instruments for which there was limited data on practice effects are grouped by domain e g **Resources in Education** ,1998-04

Minstrels and Minstrelsy in Late Medieval England Richard Rastall, Andrew Taylor, 2023 A major new study piecing together the intriguing but fragmentary evidence surrounding the lives of minstrels to highlight how these seemingly peripheral figures were keenly involved with all aspects of late medieval communities Minstrels were a common sight and sound in the late Middle Ages Aristocrats knights and ladies heard them on great occasions such as Edward I's wedding feast for his daughter Elizabeth in 1296 and in quieter moments in their chambers town dwellers heard and saw them in civic processions when their sound drew attention to the spectacle and even in the countryside people heard them at weddings church ales and other parish celebrations But who were the minstrels and what did they do How did they live and how easily did they make a living How did they perform and in what conditions The evidence is intriguing but fragmentary including literary and iconographic sources and most importantly the financial records of royal and aristocratic households and of towns These offer many insights although they are often hard to fit into any coherent picture of the minstrels' lives and their place in society It is easy to see the minstrels as peripheral figures entertainers who had no central place in the medieval world Yet they were full members of it interacting with the ordinary people around them as well as with the ruling classes carrying letters and important verbal messages some lending huge sums of money to the king to finance Henry V's Agincourt campaign in 1415 for instance some regular and necessary civic servants some committing crimes or suffering the crimes of others In this book Rastall and Taylor bring to bear the available evidence to enlarge and enrich our view of the minstrel in late medieval society
