

## SAFETY

To achieve highest operator safety, combined with ease of handling, the slide is labeled "DOUBLE ACTION ONLY". It has no manual safety and the hammer is never fully cocked.

The hammer is of a novel design. Compared to a conventional hammer, the slide is very light and consequently, operates at high velocities. It is driven by a powerful free floating extension spring. Furthermore, the hammer's mass is concentrated around its axis giving an inertia in the critical direction of the firing pin close to zero.

In its ready position the hammer is securely held by the hammer block. Only by deliberately pulling the trigger can the hammer block be disengaged. The sliding action of the barrel excludes firing unless the breech is fully locked. A direct blow to the hammer is impossible because of the slide and grip. The hammer's energy is transmitted to the firing pin through the hammer firing pin.

## MAINTENANCE

Proper function of your slide requires only the most common sense and care, and to the ammunition you use. There are a few more common causes of malfunction which may occur as follows:

**Malfunction:** Failure of the slide to lock back after firing. The slide may be jammed or it may fail to lock back. This is usually caused by the slide not being fully locked back. To correct this, pull the slide fully back and release it. Another potential cause is that the trigger was not allowed to fully reset after firing. The hammer is then dropped from the hammer block, which causes the slide to lock back. Be sure to allow the trigger to go fully forward after it has been pulled.

**Failure to Feed:** This occurs when a cartridge has been fed from a magazine but not fully

extracted. If this occurs, keep the firearm pointed in a safe direction, remove the magazine, remove the slide manually and continue shooting. If necessary change the magazine. The most common causes are dirt or foreign objects impeding the magazine's action.

**Failure to Eject:** A spent case is not fully extracted from the chamber or cannot exit the pistol. Again, keep the firearm pointed in a safe direction. Use the same technique as above. Remove the slide and continue. If necessary change the magazine. The most common causes are a damaged extractor, extractor or magazine. Improperly loaded or sized cartridges can cause this also. If any of the above problems are not solved by cleaning or by use of other brands of ammunition, stop firing, unload and return the pistol to our service department.

## DISASSEMBLY

Unload your pistol. Pull the slide back until the slide stop is locked open. Using the tip of a flat screwdriver, push the slide stop into the slide, release the slide stop and push the slide forward. Remove the barrel spring. Do not touch the barrel. Do not touch the slide stop.

## ASSEMBLY

Insert the barrel spring into the hole provided in the slide. Push the slide into the frame until the slide lock is centered when putting them back in the slide. Push the slide onto the frame until the lock is up with the grip. If the slide does not go on the frame easily make sure that the hammer is fully cocked and that the barrel and recoil spring guide is centered. While pushing down on the top of the barrel, pull the slide back all the way, compressing the recoil springs, and push up on the slide stop to hold the slide in place. Lock into the assembly pin hole and align that hole with the cut in the barrel. Insert the assembly pin until it snaps into the spring. Pull the slide back a little to release the slide stop and release the slide. Work the slide a few times to check the action. Do not use the slide stop. Always use the trigger pin and not the firing pin.
