Symonds,2012-12-06 1 Oxford and Webster s dictionaries 2 give trans Atlantic agreement in English with a common definition for Quality as degree of excellence Compared with the many words taken up by other authors definitions this is remarkably brief and no doubt unsatisfactory to many people Yet if degree means a stage in an ascending or descending series in intensity or in amount then measurement is by definition explicitly required if terms such as quality level good quality high quality etc are to have any real meaning Using measurement is inherent in the methods of all the major writers on the achievement of business

improvement through quality Results from measurements allow improvement by using tools commonly grouped under the heading Statistical Process Control SPC Results also form part of the judging criteria of Total Quality Management TQM models such as the Malcolm Baldrige National Quality Award in the USA and the more recent European Quality Award Future revisions of the ISO 9000 series of quality management system standards will specifically require measurement of defects However it is not easy for quality professionals or line managers to find examples of what they should measure and how to do it in their own particular functions in their own particular industries case studies always seem to refer to others
