

Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- 1) Circles are females and squares are males.
- 2) A shaded circle or square indicates that a person has the trait.

The pedigree seen below is for colorblindness. Shaded individuals are colorblind. Determine the probable genotype of persons 1 - 15, and then answer the questions below the table.

How did you determine the genotype of the mother at 3? *only by consulting her parents pedigree analysis*

Number 8 was colorblind just like his father. Where did the son at 8 get his allele for colorblindness?

The allele: either son got colorblind from his father, more over his mother

Neither numbers 1 nor 2 were colorblind. How did they have a colorblind son (6)?

1 & 2 will be a carrier daughter that allele was recessive for 1 & 2

What must be the genotypes of the parents of a colorblind daughter? Explain.

If number 13 marries a normal man, what is the probability that their sons will be colorblind?
