Problems And Solutions In Differential Geometry, Lie Series, Differential Forms, Relativity And Applications Willi-hans Steeb, 2017-10-20 This volume presents a collection of problems and solutions in differential geometry with applications. Both introductory and advanced topics are introduced in an easy to digest manner with the materials of the volume being self contained. In particular curves surfaces Riemannian and pseudo Riemannian manifolds Hodge duality operator vector fields and Lie series differential forms matrix valued differential forms Maurer Cartan form and the Lie derivative are covered. Readers will find useful applications to special and general relativity Yang Mills theory hydrodynamics and field theory. Besides the solved problems each chapter contains stimulating supplementary problems and software implementations are also included. The volume will not only benefit students in mathematics applied mathematics and theoretical physics but also researchers in the field of differential geometry.

Macroscopic Electrodynamics: An Introductory Graduate Treatment (Second Edition) Walter Mark Wilcox, Christopher P Thron, 2024-02-08 Macroscopic Electrodynamics ME is a comprehensive two semester introductory graduate level textbook on classical electrodynamics for use in physics and engineering programs. The word macroscopic is intended to indicate both the large scale nature of the theory as well as the emphasis placed upon applications of the so called macroscopic Maxwell equations to idealized media. ME emphasizes principles and practical methods of analysis which are often presented in fresh and original ways. Illustrative examples are carefully chosen to promote the students physical intuition and are worked out in detail to give students a thorough grounding in solution techniques. The style is informal yet mathematically sound and presumes only a basic familiarity with electrodynamics such as that obtained in a one semester junior level undergraduate class. At the end of each chapter many original problems are provided with illustrations or expanded upon specific sections of the text. The problems are at the heart of the text and are meant to encourage students develop confidence and emphasize ideas while avoiding both oversimplification and inordinate calculational difficulties.

Geometry of Black Holes Piotr T. Chruściel, 2020 Black holes present one of the most fascinating predictions of Einstein's general relativity with strong evidence of their existence through observations of many means. The book provides a wide background to the current research on all mathematical aspects of the geometry of black hole spacetimes. Lectures on Representation Theory and Knizhnik-Zamolodchikov Equations Pavel I. Etingof, Igor Frenkel, Alexander A. Kirillov, 1998 This text is devoted to mathematical structures arising in conformal field theory and the q deformations. The authors give a self contained exposition of the theory of Knizhnik Zamolodchikov equations and related topics. No previous knowledge of physics is required. The text
