Biomechanics, Sensing and Bio-inspired Control in Rehabilitation and Wearable Robotics Wujing Cao, Zirui Lan, Ningbo Yu, Keyi Wang, Wenwei Yu, 2024-12-11 Research on biomechanics sensing and bio-inspired control is vital for progressing rehabilitation and wearable robotics Biomechanical simulation can provide the theoretical basis for device design and optimize the design and control scheme The fusion of bio signals neural signals and physical signals is helpful for accurate perception and recognition of human motion intention Bio-inspired control is an important direction of individualized and efficient assistance of rehabilitation and wearable robotics In recent years with the development of biomedical and information technology the equipment used for information acquisition has been updated from cumbersome and immobile devices to small and portable ones making integration with rehabilitation and wearable robotics easier Moreover the performance of rehabilitation and wearable robotics can be quantified by changes in biomechanics and through the use of biosensors The proposed Research Topic invites theoretical and experimental research dealing with novel techniques for quantifying biomechanics sensing and bio-inspired control in rehabilitation and wearable robotics For example the use of biologically inspired actuators no longer requires rigid supports as the skeletal system can be used to that end the application of synergies or motor primitives has led to a reduction in the number of actuators or to improve their control The latest advances in modeling and simulation made it possible to assess and control fatigue or simulate using such devices outside of a clinical environment These research achievements enable a new generation of rehabilitation and wearable robotics

Nunes, 2019-06-04 This book reports on cutting edge research into innovative system interfaces highlighting both lifecycle development and human technology interaction especially in virtual augmented and mixed reality systems It describes advanced methodologies and tools for evaluating and improving interface usability and discusses new models as well as case studies and good practices The book addresses the human hardware and software factors in the process of developing interfaces for optimizing total system performance while minimizing their costs It also highlights the forces currently shaping the nature of computing and systems such as the importance of portability and technologies for reducing power requirements the necessity of a better assimilation of computation in the environment as well as solutions to promote accessibility to computers and systems for people with special needs The book which is based on the AHFE 2019 International Conference on Human Factors and Systems Interaction held on July 24-28 2019 in Washington D C USA offers a timely survey and practice oriented guide for systems interface users and developers alike *Manual Therapy for Musculoskeletal Pain Syndromes* Cesar Fernandez de las Penas, Joshua Cleland, Jan Dommerholt, 2015-04-28 A pioneering one stop manual which harvests the best proven approaches from physiotherapy research and practice to assist the busy clinician in real life screening diagnosis and management of patients with musculoskeletal pain across the whole body Led by an experienced editorial team the chapter authors have integrated both their clinical experience and expertise with reasoning based on a neurophysiologic rationale with the most updated evidence The textbook is divided into eleven sections covering the top evidence informed techniques in massage trigger points neural muscle energy manipulations dry needling myofascial release therapeutic exercise and psychological approaches In the General Introduction several authors review the epidemiology of upper and lower extremity pain syndromes and the process of taking a comprehensive history in patients affected by pain In Chapter 5 the basic principles of the physical examination are covered while Chapter 6 places the field of manual therapy within the context of contemporary pain neurosciences and therapeutic neuroscience education For the remaining sections the textbook alternates between the upper and lower quadrants Sections 2 and 3 provide state of the art updates on mechanical neck pain whiplash thoracic outlet syndrome myelopathy radiculopathy peri partum pelvic pain joint mobilizations and manipulations and therapeutic exercises among others Sections 4 to 9 review pertinent and updated aspects of the shoulder hip elbow knee the wrist and hand and finally the ankle and foot The last two sections of the book are devoted to muscle referred pain and neurodynamics The only one stop manual detailing examination and treatment of the most commonly seen pain syndromes supported by accurate scientific and clinical data Over 800 illustrations demonstrating examination procedures and techniques Led by an expert editorial team and contributed by internationally renowned researchers educators and clinicians Covers epidemiology and history taking Highly practical with a constant clinical

emphasis **Handbook of Virtual Environments** Kelly S. Hale, Kay M. Stanney, 2002-01-01 This Handbook with contributions from leading experts in the field provides a comprehensive state of the art account of virtual environments VE. It serves as an invaluable source of reference for practitioners, researchers, and students in this rapidly evolving discipline. It also provides practitioners with a reference source to guide their development efforts and addresses technology concerns as well as the social and business implications with which those associated with the technology are likely to grapple. While each chapter has a strong theoretical foundation, practical implications are derived and illustrated via the many tables and figures presented throughout the book. The Handbook presents a systematic and extensive coverage of the primary areas of research and development within VE technology. It brings together a comprehensive set of contributed articles that address the principles required to define system requirements and design, build, evaluate, implement, and manage the effective use of VE applications. The contributors provide critical insights and principles associated with their given area of expertise to provide extensive scope and detail on VE technology. After providing an introduction to VE technology, the Handbook organizes the body of knowledge into five main parts. System Requirements specifies multimodal system requirements including physiological characteristics that affect VE system design. Design Approaches and Implementation Strategies addresses cognitive design strategies, identifies perceptual illusions that can be leveraged in VE design, discusses navigational issues such as becoming lost within a virtual world, and provides insights into structured approaches to content design. Health and Safety Issues covers direct physiological effects, signs, symptoms, neurophysiology, and physiological correlates of motion sickness, perceptual and perceptual motor adaptation, and social concerns. Evaluation addresses VE usability, engineering, and ergonomics, human performance measurement in VEs, usage protocols, and provides means of measuring and managing visual, proprioceptive, and vestibular aftereffects as well as measuring and engendering sense of presence. Selected Applications of Virtual Environments provides a compendium of VE applications. The Handbook closes with a brief review of the history of VE technology. The final chapter provides information on the VE profession, providing those interested with a number of sources to further their quest for the keys to developing the ultimate virtual world.
