Parallel Problem Solving from Nature - PPSN VII Juan J. Merelo,Panagiotis Adamidis,Hans-Georg Beyer,2003-06-30 We are proud to introduce the proceedings of the Seventh International Conference on Parallel Problem Solving from Nature PPSN VII held in Granada Spain on 7-11 September 2002 PPSN VII was organized back to back with the Foundations of Genetic Algorithms FOGA conference which took place in Torremolinos Malaga Spain in the preceding week The PPSN series of conferences started in Dortmund Germany 1 From that pioneering meeting the event has been held biennially in Brussels Belgium 2 Jerusalem Israel 3 Berlin Germany 4 Amsterdam The Netherlands 5 and Paris France 6 During the Paris conference several bids to host PPSN 2002 were put forward it was decided that the conference would be held in Granada with Juan J Merelo Guervos as General Chairman The scientific content of the PPSN conference focuses on problem solving paradigms gleaned from natural models with an obvious emphasis on those that display an innate parallelism such as evolutionary algorithms and ant colony optimization algorithms The majority of the papers however concentrate on evolutionary and hybrid algorithms as is shown in the contents of this book and its predecessors This edition of the conference proceedings has a large section on applications both to classical problems and to real world engineering problems which shows how bioinspired algorithms are extending their use in the realms of business and enterprise

Ecology in Action Fred D. Singer,2016-03-10 Taking a fresh approach to integrating key concepts and research processes this undergraduate textbook encourages students to develop an understanding of how ecologists raise and answer real world questions Four unique chapters describe the development and evolution of different research programs in each of ecology's core areas showing students that research is undertaken by real people who are profoundly influenced by their social and political environments Beginning with a case study to capture student interest each chapter emphasizes the linkage between observations ideas questions hypotheses predictions results and conclusions Discussion questions integrated within the text encourage active participation and a range of end of chapter questions reinforce knowledge and encourage application of analytical and critical thinking skills to real ecological questions Students are asked to analyze and interpret real data with support from online tutorials demonstrating the R programming language for statistical analysis

The Evolution of Population Biology Rama S. Singh, Marcy K. Agents and Goals in Evolution Samir Okasha,2018-06-12 Samir Okasha approaches evolutionary biology from a philosophical perspective in Agents and Goals in Evolution analysing a mode of thinking in biology called agential thinking He considers how the

paradigm case involves treating an evolved organism as if it were an agent pursuing a goal such as survival or reproduction and seeing its phenotypic traits as strategies for achieving that goal or furthering its biological interests As agential thinking deliberately transposes a set of concepts goals interests strategies from rational human agents and to the biological world more generally Okasha's enquiry firstly looks at the justification for this is it mere anthropomorphism or does it play a genuine intellectual role in the science From this central question key points are considered such as how do we identify the goal that evolved organisms will behave as if they are trying to achieve Can agential thinking ever be applied to groups rather than to individual organisms And how does agential thinking relate to the controversies over fitness maximization in evolutionary biology In addition Okasha examines the relation between the adaptive and the rational by considering whether organisms can validly be treated as agent like Should we expect their evolved behaviour to correspond with that of rational agents as codified in the theory of rational choice If so does this mean that the fitness maximizing paradigm of the evolutionary biologist can be mapped directly to the utility maximizing paradigm of the rational choice theorist All of these important questions are engagingly raised and discussed at length

Domains and Major Transitions of Social Evolution
Jacobus J. Boomsma, 2023-05-24 Evolutionary change is usually incremental and continuous but some increases in organizational complexity have been radical and divisive Evolutionary biologists who refer to such events as major transitions have not always appreciated that these advances were novel forms of pairwise commitment that subjugated previously independent agents Inclusive fitness theory convincingly explains cooperation and conflict in societies of animals and free living cells but to deserve its eminent status it should also capture how major transitions originated from prokaryote cells to eukaryote cells via differentiated multicellularity to colonies with specialized queen and worker castes As yet no attempt has been made to apply inclusive fitness principles to the origins of these events Domains and Major Transitions of Social Evolution develops the idea that major evolutionary transitions involved new levels of informational closure that moved beyond looser partnerships Early neo Darwinians understood this principle but later social gradient thinking obscured the discontinuity of life's fundamental organizational transitions The author argues that the major transitions required maximal kinship in simple ancestors not conflict reduction in already elaborate societies Reviewing more than a century of literature he makes testable predictions proposing that open societies and closed organisms require very different inclusive fitness explanations It appears that only human ancestors lived in societies that were already complex before our major cultural transition occurred We should therefore not impose the trajectory of our own social history on the rest of nature This thought provoking text is suitable for graduate level students taking courses in evolutionary biology behavioural ecology organismal developmental biology and evolutionary genetics as well as professional researchers in these fields It will also appeal to a broader interdisciplinary audience including the social sciences and humanities
