

The Project window

Window Overview

The Project window is the main window in Cubase. This provides you with an overview of the project, allowing you to navigate and perform large scale editing. Each project has one Project window.

About tracks

The Project window is divided vertically into tracks, with a timeline running horizontally from left to right. The following track types are available:

Track type	Description
Audio	For recording and playing back audio events and audio parts. Each audio track has a corresponding audio channel in the MixConsole. An audio track can have any number of automation tracks for automating channel parameters, effect settings, etc.
Folder	Folder tracks function as containers for other tracks, making it easier to organize and manage the track structure. They also allow you to edit several tracks at the same time, see "Organizing tracks in folder tracks" on page 97 .
FX Channel	FX channel tracks are used for adding send effects. Each FX channel can contain up to eight effect processors – by routing sends from an audio channel to an FX channel, you send audio from the audio channel to the effect(s) on the FX channel. Each FX channel has a corresponding channel in the MixConsole – in essence an effect return channel, see the chapter "Audio effects" on page 227 . All FX channel tracks are automatically placed in a special FX channel folder in the track list, for easy management. An FX channel can also have any number of automation tracks for automating channel parameters, effect settings, etc.
