Computational Optimization Vladislav Bukshtynov, 2023-02-17 This textbook offers a guided tutorial that reviews the theoretical fundamentals while going through the practical examples used for constructing the computational framework applied to various real life models Computational Optimization Success in Practice will lead the readers through the entire process They will start with the simple calculus examples of fitting data and basics of optimal control methods and end up constructing a multi component framework for running PDE constrained optimization This framework will be assembled piece by piece the readers may apply this process at the levels of complexity matching their current projects or research needs By connecting examples with the theory and discussing the proper communication between them the readers will learn the process of creating a big house Moreover they can use the framework exemplified in the book as the template for their research or course problems they will know how to change the single bricks or add extra floors on top of that This book is for students faculty and researchers Features The main optimization framework builds through the course exercises and centers on MATLAB All other scripts to implement computations for solving optimization problems with various models use only open source software e g FreeFEM All computational steps are platform independent readers may freely use Windows macOS or Linux systems All scripts illustrating every step in building the optimization framework will be available to the readers online Each chapter contains problems based on the examples provided in the text and associated scripts The readers will not need to create the scripts from scratch but rather modify the codes provided as a supplement to the book This book will prove valuable to graduate students of math computer science engineering and all who explore optimization techniques at different levels for educational or research purposes It will benefit many professionals in academic and industry related research professors researchers postdoctoral fellows and the personnel of R D departments Mathematics Education in the Age of Artificial Intelligence Philippe R. Richard, M. Pilar Vélez, Steven Van Vaerenbergh, 2022-03-09 This book highlights the contribution of artificial intelligence for mathematics education It provides concrete ideas supported by mathematical work obtained through dynamic international collaboration and discusses the flourishing of new mathematics in the contemporary world from a sustainable development perspective Over the past thirty years artificial intelligence has gradually infiltrated all facets of society When it is deployed in interaction with the human designer or user AI certainly raises new ethical questions But as soon as it aims to augment intelligence in a kind of human machine partnership it goes to the heart of knowledge development and the very performance of work The proposed themes and the sections of the book address original issues relating to the creation of AI milieus to work on mathematics to the AI supported learning of mathematics and to the coordination of usual paper pencil techniques and new AI aided educational working spaces The authors of the book and the coordinators of each section are all established specialists in mathematics didactics mathematics and computer science In summary this book is a must read for everyone interested in the teaching and learning of mathematics and it concerns the

interaction between the human and the machine in both directions It contains ideas questions and inspiration that invite to take up the challenge of Artificial Intelligence contributing to Mathematical Human Learning **Cornell University**
