Jean-Pierre Deschamps, Gustavo D. Sutter, Enrique Cantó, 2012-04-02 This book is designed both for FPGA users interested in developing new specific components generally for reducing execution times and IP core designers interested in extending their catalog of specific components The main focus is circuit synthesis and the discussion shows for example how a given algorithm executing some complex function can be translated to a synthesizable circuit description as well as which are the best choices the designer can make to reduce the circuit cost latency or power consumption This is not a book on algorithms It is a book that shows how to translate efficiently an algorithm to a circuit using techniques such as parallelism pipeline loop unrolling and others Numerous examples of FPGA implementation are described throughout this book and the circuits are modeled in VHDL Complete and synthesizable source files are available for download **Computer System Design**

Michael J. Flynn, Wayne Luk, 2011-08-08 The next generation of computer system designers will be less concerned about details of processors and memories and more concerned about the elements of a system tailored to particular applications These designers will have a fundamental knowledge of processors and other elements in the system but the success of their design will depend on the skills in making system level tradeoffs that optimize the cost performance and other attributes to meet application requirements This book provides a new treatment of computer system design particularly for System on Chip SOC which addresses the issues mentioned above It begins with a global introduction from the high level view to the lowest common denominator the chip itself then moves on to the three main building blocks of an SOC processor memory and interconnect Next is an overview of what makes SOC unique its customization ability and the applications that drive it

The final chapter presents future challenges for system design and SOC possibilities *Handbook on Mobile and Ubiquitous Computing* Laurence T. Yang, Evi Syukur, Seng W.
