CHAPTER 9 - LOCKOUT/TAGOUT

Revision Date: 11/96

9.1 SCOPE

This chapter sets forth the minimum standards required by the Occupational Safety and Health Administration (OSHA) as given in 29 CFR 1910.147, "Control of Hazardous Energy (Lockout/Tagout)." It applies to both Government and contractor personnel as a means of controlling exposures to potentially hazardous energy sources during work operations at the NASA Glenn Cleveland Center and Plum Brook Station. It imposes basic rules to be followed to ensure protection against harmful exposures, and it presents the requirements for lockout/tagout. Exceptions to these safety standards must be authorized by the cognizant Safety Committee and reviewed by the GSO.

These standards do not apply to operations known as "hot tapping." These shall be dealt with on an individual basis by the appropriate Safety Committee and the GSO.

The procedures set forth in this chapter apply, during all work activities, to the control of potentially hazardous energy sources at any energy level capable of causing injury to personnel, damage to equipment, harm to the environment, and loss or compromise of test data. Energy sources and work activities include, but are not limited to, the following:

Energy sources	Work activities
Acoustical systems	Construction
Vacuum systems	Maintenance
Electrical systems	Installation
Pneumatic systems	Calibration
Hydraulic systems	Adjustment
Mechanical systems	Inspection
Compressed gas	Cleaning
Spring tension/compression	Repair
Suspended or moving loads	Close contact
Chemicals/fuels	
Cryogenics	
Ionizing/non-ionizing radiation (e.g., lasers)	
Thermal systems (i.e., heat/cold)

Reliability and Maintainability (RAM) Training Vincent R. Lalli, 2000 The theme of this manual is failure physics the study of how products hardware software and systems fail and what can be done about it The intent is to impart useful information to extend the limits of production capability and to assist in achieving low cost reliable products In a broader sense the manual should do more It should underscore the urgent need for mature attitudes toward reliability Five of the chapters were originally presented as a classroom course to over 1000 Martin Marietta engineers and technicians Another four chapters and three appendixes have been added We begin with a view of reliability from the years 1940 to 2000 Chapter 2 starts the training material with a review of mathematics and a description of what elements contribute to product failures The remaining chapters elucidate basic reliability theory and the disciplines that allow us to control and eliminate failures
