Simulation of Suicide Bombing Zeeshan-Ul-Hassan Usmani, Daniel Kirk, 2011. This book introduces BlastSim, a physics-based simulation platform to model and simulate suicide bombing events. The BlastSim software is designed to test, analyze, and validate the results of different explosive and injury model combinations under various conditions with different sets of parameters such as explosive and crowd formation characteristics, blockage, and human shielding effects, fragmentation, and shrapnel, and the bomber's position in 2 and 3 dimensional environments. The suicide bombing event can also be re-created for forensic analysis. The number of fatalities and injured after a suicide bombing event can be predicted using this software with 91% accuracy.
