Sunitha, 2010 Formal Languages and Automata Theory deals with the mathematical abstraction model of computation and its relation to formal languages This book is intended to expose students to the theoretical development of computer science It also provides conceptual tools that practitioners use in computer engineering An assortment of problems illustrative of each method is solved in all possible ways for the benefit of students The book also presents challenging exercises designed to hone the analytical skills of students *Automata Theory and*

Formal Languages Alberto Pettorossi, 2013 *A Course in Formal Languages, Automata and Groups* Ian M.

Chiswell, 2009-02-06 This book is based on notes for a master's course given at Queen Mary University of London in the 1998-9 session. Such courses in London are quite short and the course consisted essentially of the material in the first three chapters together with a two-hour lecture on connections with group theory. Chapter 5 is a considerably expanded version of this. For the course the main sources were the books by Hopcroft and Ullman [20] by Cohen [4] and by Epstein et al [7]. Some use was also made of a later book by Hopcroft and Ullman [21]. The ulterior motive in the first three chapters is to give a rigorous proof that various notions of recursively enumerable language are equivalent. Three such notions are considered. These are generated by a type 0 grammar, recognised by a Turing machine, deterministic or not, and defined by means of a Gödel numbering having defined recursively enumerable for sets of natural numbers. It is hoped that this has been achieved without too many arduous arguments using complicated notation. This is a problem with the entire subject and it is important to understand the idea of the proof which is often quite simple. Two particular places that are heavy going are the proof at the end of Chapter 1 that a language recognised by a Turing machine is type 0 and the proof in Chapter 2 that a Turing machine computable function is partial recursive.

An Introduction to Formal Languages and Automata Peter Linz, 2001 Formal languages, automata, computability and related matters form the major part of the theory of computation.
