professions Chapter 1 outlines the necessity for drainage on a large or small scale for rural and urban areas As the drainage engineer must decide how much unwanted water there will be and when it will occur the chapter discusses climatic types prediction of rainfall evapotranspiration effects return periods of design storms and runoff events river flow and flood prediction and various sensing systems for providing short term predictions of rainfall runoff streamflow and flood warning Chapter 2 gives a thorough review of the properties of soil in the context of drainage design The extensive mathematical theories which relate to the crucial area of soil water movement are outlined and due attention is paid to the growing importance of predicting soil water movement in partially saturated soils *CTA Journal* ,1950 Smithsonian Contributions to Paleobiology ,1969 **Atlas of Paleocene Planktonic Foraminifera** Richard K. and Two New Species of Eocene Luvarids Aleksandr Fedorovich Bannikov, James C. Tyler, 1995 Ten synapomorphies are described that support the proposed sister group relationship of the Eocene Kushlukidae and the Eocene to Recent Luvaridae as the superfamilial clade Luvaroidea at the node between the siganid and zancid acanthurid clades of acanthuroid fishes. The Kushlukidae previously have been known only on the basis of *Kushlukia permira* Danilchenko from the Eocene of Turkmenistan but another species of that age is shown to have been present in India; the latter is not given a new specific name because the two specimens of it are only fragments. In addition to the well known Recent species *Luvarus imperialis* three fossil species have been referred to the Luvaridae: *Proluvarus necopinatus* Danilchenko from the Eocene of Turkmenistan is here recognized as a valid species of *Luvarus* with *Proluvarus* becoming a junior synonym of *Luvarus*; *Eoluvarus bondei* Sahni and Choudhary from the Eocene of India is shown to be not a luvarid but rather a member of the fossil perciform family Exelliidae, the affinities of which family are poorly understood; *Luvarus praeimperialis* Arambourg from the Oligocene of Iran is shown to be not a luvarid but rather a representative of the new genus *Aluvarus* of such uncertain affinity that we simply place it *incertae sedis* among the percomorphs. Among the materials used by Danilchenko in the description of *Proluvarus necopinatus* only the holotype and the five other largest specimens about 326–495 mm SL represent that species. All of the other specimens are smaller than about 215 mm SL and represent two new species of a new genus of luvarid: *Avitoluvarus diana* and *A. mariannae*. Numerous derived features are used to define both the Kushlukidae and Luvaridae. Within the Luvaridae the preponderance of derived features is found in *Luvarus* whereas *Avitoluvarus* has only two unequivocal synapomorphies. The Luvaroidea therefore are represented by the Eocene Kushlukidae with one genus and two species *Kushlukia permira* and *K. sp.* and the Luvaridae with one Eocene genus with two species *Avitoluvarus diana* and *A. mariannae* and one genus *Luvarus* with one Eocene species *L. necopinatus* and one Recent species *L. imperialis*.
