Sustainable Retail Refrigeration Judith A. Evans, Alan M. Foster, 2016-01-19 Carbon emissions from the retail segment of the food cold chain are relatively high compared to other parts of the food cold chain. Studies have also shown that food temperature is less well controlled at the retail and consumer end of the cold chain. There is therefore considerable potential to optimize performance of refrigerated display cabinets and the refrigeration systems that are used to operate them to reduce carbon emissions and to improve food temperature control. *Sustainable Retail Refrigeration* draws together world experts on retail refrigeration. In a single resource the authors cover the latest technologies and best current knowledge in the field. With increasing concerns about energy use and global warming gasses retailers are increasingly being called to account for their actions. *Sustainable Retail Refrigeration* is a valuable reference to manufacturers, managers and policy makers incorporating both a design and an operational perspective.

Handbook of Water and Energy Management in Food Processing Jiri Klemes, Robin Smith, Jin-Kuk Kim, 2008-06-30 Effective water and energy use in food processing is essential, not least for legislative compliance and cost reduction. This major volume reviews techniques for improvements in the efficiency of water and energy use as well as wastewater treatment in the food industry. Opening chapters provide an overview of key drivers for better management. Part two is concerned with assessing water and energy consumption and designing strategies for their reduction. These include auditing energy and water use and modelling and optimisation tools for water minimisation. Part three reviews good housekeeping procedures, measurement and process control and monitoring and intelligent support systems. Part four discusses methods to minimise energy consumption. Chapters focus on improvements in specific processes such as refrigeration, drying and heat recovery. Part five discusses water reuse and wastewater treatment in the food industry. Chapters cover water recycling, disinfection techniques, aerobic and anaerobic systems for treatment of wastewater. The final section concentrates on particular industry sectors including fresh meat and poultry, cereals, sugar, soft drinks, brewing and
