

Introduction

1.1 Project Acer

Acer is implementing sap in "Project UCB" to have latest and standard version of software to make things flow in standard and fluent manner using SAP suite of applications.

1.2 Implementation Mythology

Project Acer is being implemented using Accelerated SAP (ASAP) methodology. SAP leverages a core set of methodologies and tools designed to deliver rapid, reliable results, and to help our customers get the most from their solutions. These include the ASAP Methodology for Implementation (content the project team follows to implement SAP software efficiently).

The ASAP methodology adheres to a specific road map that addresses the following five general phases:

➤ Project Preparation:

In this step the project team is identified and mobilized, the project standards are defined, and the project work environment is set up.

➤ Business Blueprint:

In this step the business processes are defined and the business blueprint document is designed.

➤ Realization:

In this step the system is configured, knowledge transfer occurs, extensive unit testing is completed, and data mappings and data requirements for migration are defined.

➤ Final Preparation:

In which final integration testing, stress testing, and conversion testing are conducted, and all end users are trained.

➤ Go-Live and Support:

In which the data is migrated from the legacy systems, the new system is activated, and post-implementation support is provided.

The Definitive Guide to Modernizing Applications on Google Cloud Steve (Satish) Sangapu, Dheeraj Panyam, Jason Marston, 2022-01-06 Get to grips with the tools services and functions needed for application migration to help you move from legacy applications to cloud native on Google Cloud Key Features Discover how a sample legacy application can be transformed into a cloud native application on Google Cloud Learn where to start and how to apply application modernization techniques and tooling Work with real world use cases and

instructions to modernize an application on Google Cloud

Book Description Legacy applications which comprise 75-80% of all enterprise applications often end up being stuck in data centers. Modernizing these applications to make them cloud native enables them to scale in a cloud environment without taking months or years to start seeing the benefits. This book will help software developers and solutions architects to modernize their applications on Google Cloud and transform them into cloud native applications. This book helps you to build on your existing knowledge of enterprise application development and takes you on a journey through the six Rs: rehosting, replatforming, rearchitecting, repurchasing, retiring, and retaining. You will learn how to modernize a legacy enterprise application on Google Cloud and build on existing assets and skills effectively. Taking an iterative and incremental approach to modernization, the book introduces the main services in Google Cloud in an easy-to-understand way that can be applied immediately to an application. By the end of this Google Cloud book, you will have learned how to modernize a legacy enterprise application by exploring various interim architectures and tooling to develop a cloud native, microservices-based application. What you will learn:

- Discover the principles and best practices for building cloud native applications.
- Study the six Rs of migration strategy and learn when to choose which strategy.
- Rehost a legacy enterprise application on Google Compute Engine.
- Replatform an application to use Google Load Balancer and Google Cloud SQL.
- Refactor into a single-page application (SPA) supported by REST services.
- Replatform an application to use Google Identity Platform and Firebase Authentication.
- Refactor to microservices using the strangler pattern.
- Automate the deployment process using a CI/CD pipeline with Google Cloud Build.

Who this book is for This book is for software developers and solutions architects looking to gain experience in modernizing their enterprise applications to run on Google Cloud and transform them into cloud native applications. Basic knowledge of Java and Spring Boot is necessary. Prior knowledge of Google Cloud is useful but not mandatory.
