*Teaching Mathematics Using Popular Culture* Elana Reiser, 2015-11-09 Mathematics teachers often struggle to motivate their students. One way to cultivate and maintain student interest is for teachers to incorporate popular media into their methodology. Organized on the subject strands of the Common Core, this book explores math concepts featured in contemporary films and television shows and offers numerous examples high school math teachers can use to design lessons using pop culture references. Outlines for lessons are provided along with background stories and historical references.

Network Coding and Subspace Designs Marcus Greferath, Mario Osvin Pavčević, Natalia Silberstein, María Ángeles Vázquez-Castro, 2018-01-29 This book, written by experts from universities and major research laboratories, addresses the hot topic of network coding, a powerful scheme for information transmission in networks that yields near optimal throughput. It introduces readers to this striking new approach to network coding in which the network is not simply viewed as a mechanism for delivering packets but rather an algebraic structure named the subspace which these packets span. This leads to a new kind of coding theory employing what are called subspace codes. The book presents selected highly relevant advanced research output on Subspace Codes and Rank Metric Codes, Finite Geometries and Subspace Designs, Application of Network Coding Codes for Distributed Storage Systems. The outcomes reflect research conducted within the framework of the European COST Action IC1104 Random Network Coding and Designs over GF  $q$ . Taken together, they offer communications engineers, R & D engineers, researchers and graduate students in Mathematics, Computer Science and Electrical Engineering a comprehensive reference guide to the construction of optimal network codes as well as efficient encoding and decoding schemes for a given network code. **Mathematical Software - ICMS 2020** Anna Maria

Mei, Liming Shu, Justin Fernandez, 2024-11-19 Neuromusculoskeletal biomechanics has been a popular topic in understanding the disorders of the human motor system during daily clinical and sport specific activities. Recent studies have been conducted to examine the neuromusculoskeletal control e.g. postural control, gait stability and falling, the mechanisms of sports injuries e.g. Anterior Cruciate Ligament, Achilles Tendon, hamstring strain and bone fracture and clinical diseases e.g. joint Osteoarthritis and cerebral palsy etc and the task based functional assessment. However, previous biomechanical approaches such as the traditional lab based experiments, musculoskeletal MSK modeling and Finite Element (FE) simulation

are employed separately to investigate the above biomechanical problems In recent decades several excellent and open source platforms or software have been developed based on the rapid development of technology and advances in interdisciplinary fusion The cross platform compatibility challenges were overcome specifically for subject specific to population based studies experimental scenarios lab motion capture to intelligent wearables and markerless sensing and rigid to continuum tissue loading formation adaptability and damage All these techniques when combined may offer promising plausibility to understand motor disorders or diseases As a result this Research Topic will serve as a compendium of techniques mentioned above but not limited to for understanding neuromusculoskeletal disorders with a special interest in fusion with Digital Technologies This Research Topic aims to gather Original Research articles and Review articles that integrate current state of the art neuromusculoskeletal including musculoskeletal neuromuscular or neuroskeletal modeling approaches and Digital Technologies Digital Twin DT to investigate the complex biomechanical mechanisms for the prevention diagnosis treatment and rehabilitation of disorders in the human motor system Moreover this Research Topic would like to publish studies on experiment driven and muscle driven computational MSK and FE modeling of neuro muscular tendon bone and joint ligament and cartilage tissues for the injury and rehabilitation of the musculoskeletal system
