

Virtual Blood Pressure Lab

Objectives

Click on <https://www.khanacademy.org/a/your-lab-101-lesson> to complete lab. Follow the directions in that document at the end.

Introduction

Click "Introduction" in the upper right corner to read the introduction to the lab. Click the "Tutorial" button and answer the three questions below.

1. What is pressure and the relationship of age and gender to blood pressure?

As age increases, blood vessel elasticity decreases and increases the resistance to blood flow, which causes a subsequent increase in blood pressure.

2. What does knowledge about the body and the circulatory system enable us to predict about how the average blood pressure for a group of individuals is affected by manipulating the age and gender of the group members?

If we increase a group's age, the blood pressure for that group will go up significantly and if we decrease a group's age, the blood pressure for that group will go down significantly.

3. How will you use the knowledge you have gained about blood pressure? What steps will you follow? What research will you do?

Instead of blood pressure, we will be looking at the relationship between age and gender and blood pressure. We will be using the data from the lab to see if there is a relationship between age and gender and blood pressure.

Steps

To make the experimental results more meaningful, we will do the lab. On the experiment page, all age groups and all sexes are listed. In this lab, we will be using only the age groups and sexes listed in the table below.

Average Blood Pressure

Age Group	Male Average	Female Average	Male Average	Female Average
20-29	118	115	118	117
30-39	125	119	124	121
40-49	132	125	132	127
50-59	139	134	139	135
60-69	146	141	147	148
