Injuries are not destiny This revolutionary new account of the science of injury prevention shows how ballistic movement can help you get strong stay healthy and be elite The biggest victories of medical science over polio smallpox heart attacks and the like are stories of prevention Then there s sports where we just run around until something breaks leading to pain frustration and sometimes even expensive surgery Injuries are a major cause of society s growing mobility crisis What if we could predict and prevent them Blending cutting edge science with gripping storytelling award winning data journalist and competitive amateur athlete Henry Abbott reveals that we are on the cusp of a new era in sports medicine built around the science of ballistic movements leaping and landing and the unique fingerprint of your body s physics Abbott s inspiring narrative tells the story of sports scientist Dr Marcus Elliott and the Peak Performance Project P3 who use technology to study how athletes move and why they get hurt Applying machine learning and lessons from biomechanics medicine and physiology doctors at P3 can now detect elevated risk of an ACL tear or a pulled hamstring like an echocardiogram can see warning signs of a heart attack Their data driven findings are full of surprises Your body s most important defense against knee and ankle injuries are the little known muscles in the lower leg and hip area which typical workouts rarely target Similarly the glutes not the core do the most to prevent back pain Transformative benefits flow from training underappreciated kinds of athleticism like rotation deceleration and relaxation Most of all science shows that the best athletes don t avoid ballistics they master them Through riveting stories of elite athletes overcoming injuries and pushing themselves to the limit Abbott presents an evidence based case for intervening early to protect our bodies And he suggests that we can all harness the science of ballistic movement not just to run fast or jump high but to move with joy and lead fulfilling athletic lives

Biennial Report Kansas State Horticultural Society,1880 Eureka Chad Orzel,2014-12-09 When it comes to science too often people say I just don't have the brains for it and leave it at that Why is science so intimidating and why do people let themselves feel this way What makes one person a scientist and another disinclined even to learn how to read graphs The idea that scientists are people who wear lab coats and are somehow smarter than the rest of us is a common yet dangerous misconception that puts science on an intimidating pedestal How did science become so divorced from everyday experience In Eureka science popularizer Chad Orzel argues that even the people who are most forthright about hating science are doing science often without even knowing it Orzel shows that science is central to the human experience every human can think like a scientist and regularly does so in the course of everyday activities The common misconception is that science is a body of boring abstract often mathematical facts In truth science is a process Looking at the world Thinking about what makes it work Testing your mental model by comparing it to reality and Telling others about your results all things that people do daily By revealing the connection between the everyday activities that people do solving crossword puzzles playing sports or even watching mystery shows on television and the processes used to make great scientific discoveries Eureka

shows that this process is one everybody uses regularly and something that anyone can do
