On Being Blue William H. Gass, 2014-03-11 On Being Blue is a book about everything blue sex and sleaze and sadness among other things and about everything else It brings us the world in a word as only William H Gass among contemporary American writers can do Gass writes Of the colors blue and green have the greatest emotional range Sad reds and melancholy yellows are difficult to turn up Among the ancient elements blue occurs everywhere in ice and water in the flame as purely as in the flower overhead and inside caves covering fruit and oozing out of clay Although green enlivens the earth and mixes in the ocean and we find it copperish in fire green air green skies are rare Gray and brown are widely distributed but there are no joyful swatches of either or any of exuberant black sullen pink or acquiescent orange Blue is therefore most suitable as the color of interior life Whether slick light sharp high bright thin quick sour new and cool or low deep sweet dark soft slow smooth heavy old and warm blue moves easily among them all and all profoundly qualify our states of feeling

Blue Ecocriticism and the Oceanic Imperative Sidney I. Dobrin, 2021-03-28 This book initiates a conversation about blue ecocriticism critical ethical cultural and political positions that emerge from oceanic or aquatic frames of mind rather than traditional land based approaches Ecocriticism has rapidly become not only a disciplinary legitimate critical form but also one of the most dynamic active criticisms to emerge in recent times However even in its institutional success ecocriticism has exemplified an ocean deficit That is ecocriticism has thus far primarily been a land based criticism stranded on a liquid planet Blue Ecocriticism and the Oceanic Imperative contributes to efforts to

overcome ecocriticism's ocean deficit. The chapters explore a vast archive of oceanic literature, visual art, television, and film games, theory, and criticism. By examining the relationships between these representations of ocean and cultural imaginaries, Blue Ecocriticism works to unmoor ecocriticism from its land-based anchors. This book aims to simultaneously advance blue ecocriticism as an intellectual pursuit within the environmental humanities and to advocate for ocean conservation as a derivative of that pursuit.

Black Michel Pastoureau, 2023-06-13 The story of the color black in art, fashion, and culture from the beginning of history to the twenty-first century. Black, favorite color of priests and penitents, artists and ascetics, fashion designers and fascists, has always stood for powerfully opposed ideas: authority and humility, sin and holiness, rebellion and conformity, wealth and poverty, good and bad. In this beautiful and richly illustrated book, the acclaimed author of *Blue* now tells the fascinating social history of the color black in Europe. In the beginning was black. Michel Pastoureau tells us. The archetypal color of darkness and death, black was associated in the early Christian period with hell and the devil but also with monastic virtue. In the medieval era, black became the habit of courtiers and a hallmark of royal luxury. Black took on new meanings for early modern Europeans as they began to print words and images in black and white and to absorb Isaac Newton's announcement that black was no color after all. During the romantic period, black was melancholy's friend, while in the twentieth century, black and white came to dominate art, print, photography, and film, and was finally restored to the status of a true color. For Pastoureau, the history of any color must be a social history, first because it is societies that give colors everything from their changing names to their changing meanings, and black is exemplary in this regard. In dyes, fabrics, and clothing, and in painting and other art works, black has always been a forceful and ambivalent shaper of social, symbolic, and ideological meaning in European societies. With its striking design and compelling text, *Black* will delight anyone who is interested in the history of fashion, art, media, or design.

The Materiality of Color Andrea Feiser, Maureen Daly Goggin, Beth Fowkes Tobin, 2012 The purpose of this essay collection is to recover color's complex and sometimes morally troubling past. By emphasising color's materiality and how it was produced, exchanged, and used, contributors draw attention to the disjuncture between the beauty of color and the blood, sweat, and tears that went into its production, circulation, and application, as well as to the complicated and varied social meanings attached to color within

specific historical and social contexts

On Color David
Kastan, Stephen Farthing, 2018-05-22 Our lives are saturated by color We live in a world of vivid colors and color marks our psychological and social existence But for all color's inescapability we don't know much about it Now authors David Scott

Kastan and Stephen Farthing offer a fresh and imaginative exploration of one of the most intriguing and least understood aspects of everyday experience. Kastan and Farthing, a scholar and a painter respectively, investigate color from numerous perspectives: literary, historical, cultural, anthropological, philosophical, art historical, political, and scientific. In ten lively and wide-ranging chapters, each devoted to a different color, they examine the various ways colors have shaped and continue to shape our social and moral imaginations. Each individual color becomes the focal point for a consideration of one of the extraordinary ways in which color appears and matters in our lives. Beautifully produced in full color, this book is a remarkably smart, entertaining, and fascinating guide to this elusive topic.

The Philosophy of Imagination Galit Wellner, Geoffrey Dierckxsens, Marco Arienti, 2024-04-18

Combining perspectives from both continental and analytic philosophy, this timely volume explores how imagination today both shapes and is shaped by technology, art, and ethics. Imagination is one of the most significant and broadly examined concepts in contemporary philosophy and is frequently understood as a basic human faculty that enables complex activities. This book shows, however, that imagination is more than a mere enabler. Whilst imagination shapes our experiences, it is at the same time shaped by our environments. Some of the most creative manifestations of imagination are the result of its two-way interaction with art or technology or both. In short, imagination co-shapes us. Beyond the traditional perspectives of Kant and Heidegger, *The Philosophy of Imagination: Technology, Art, and Ethics* examines our dynamic relationship with imagination from contemporary technological advancements such as AI that transform the whole ecosystem to imagination in the context of videogames and literary fiction. Analysing societal imagination, it addresses the relationship between the racial imaginary and white ignorance, as well as the effects that societal mechanisms such as lockdowns can have on our imagination. Taking its cue from the here and now, this volume brings together leading international scholars to investigate how the concept of co-shaping allows us to see imagination and its crucial role in society in new and productive ways.

Science and Art Antonio Sgamellotti, Brunetto Giovanni Brunetti, Costanza Miliani, 2020-02-24

Science and art are increasingly interconnected in the activities of the study and conservation of works of art. Science plays a key role in cultural heritage from developing new analytical techniques for studying the art to investigating new ways of preserving the materials for the future. For example, high-resolution multispectral examination of paintings allows art historians to view underdrawings barely visible before, while the use of non-invasive and micro-sampling analytical techniques allow scientists to identify pigments and binders that help art conservators in their work. It also allows curators to understand more about how the artwork was originally painted. Through a series of case studies written by scientists together with art historians, archaeologists, and conservators, *Science and Art: The Painted Surface* demonstrates how the cooperation between science and humanities can lead to an increased understanding of the history of art and to better techniques in conservation. The examples used in the book cover paintings from ancient history, Renaissance, modern, and contemporary art belonging to the artistic expressions of world regions from the Far East to

America and Europe Topics covered include the study of polychrome surfaces from pre Columbian and medieval manuscripts the revelation of hidden images below the surface of Van Gogh paintings and conservation of acrylic paints in contemporary art Presented in an easily readable form for a large audience the book guides readers into new areas uncovered by the link between science and art The book features contributions from leading institutions across the globe including the Metropolitan Museum of Art New York Art Institute of Chicago Getty Conservation Institute Opificio delle Pietre Dure Firenze National Gallery of London Tate Britain Warsaw Academy of Fine Art and the National Gallery of Denmark as well as a chapter covering the Thangka paintings by Nobel Prize winner Richard Ernst
