*Chemistry and Chemical Technologies in Waste Valorization* Carol Sze Ki Lin, 2018-08-13 The series Topics in Current

Chemistry Collections presents critical reviews from the journal Topics in Current Chemistry organized in topical volumes. The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology, medicine, and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging, which is of interest to a larger scientific audience. Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field.

*Biomass Supply Chains for Bioenergy and Biorefining* Jens Bo Holm-Nielsen, Ehiaze Augustine Ehimen, 2016-02-23

*Biomass Supply Chains for Bioenergy and Biorefining* highlights the emergence of energy generation through the use of biomass and the ways it is becoming more widely used. The supply chains that produce the feedstocks harvest, transport, store, and prepare them for combustion or refinement into other forms of fuel are long and complex, often differing from feedstock to feedstock. *Biomass Supply Chains for Bioenergy and Biorefining* considers every aspect of these supply chains, including their design, management, socioeconomic, and environmental impacts. The first part of the book introduces supply chains, biomass feedstocks, and their analysis, while the second part looks at the harvesting, handling, storage, and transportation of biomass. The third part studies the modeling of supply chains and their management, with the final section discussing in minute detail the supply chains involved in the production and usage of individual feedstocks, such as wood and sugar, starches, oil crops, industrial biomass wastes, and municipal sewage sludge. It focuses on the complex supply chains of the various potential feedstocks for biomass energy generation. Studies a wide range of biomass feedstocks, including woody energy crops, sugar and starch crops, lignocellulosic crops, oil crops, grass crops, algae, and biomass waste. Reviews the modeling and optimization, standards, quality control, and traceability, socioeconomic, and environmental impacts of supply chains.
