**Microeconomic Theory** Walter Nicholson, 1985      *Microeconomic Theory* Walter Nicholson, Christopher Snyder, 2024-11-04      *Economic Growth and the Environment* Clas Eriksson, 2013-04-25 Economic Growth and the Environment explores the debate on how to reconcile economic growth with protection of the natural environment and the closely related discussion on whether an increasing scarcity of natural resources will eventually force economic growth to cease The debate focusses on whether environmental policies will benefit the economy or not and is divided into growth optimists and growth pessimists In general economists have been optimistic and have pointed to the possibilities of technological progress and substitution yet they also acknowledge that natural resources and environmental concern do restrict economic growth The difficulty lies in quantifying the constraint to economic growth Modern growth economists have constructed models to examine to what extent growth pessimism is theoretically warranted This book provides an introduction to some of these models brings together the discussion between growth optimists and pessimists and presents

the theory behind their arguments It aims to present models where both sides can meet and where both are able to derive expected results with the parameter values that they deem appropriate From there the discussions can turn to the empirical observations about these parameters This book will be of interest to advanced undergraduates in economics microeconomics economic growth sustainable development and environmental economics Each chapter concludes with a set of Exercises designed to help the reader master the models

*Economics of Higher Education* Robert K. Toutkoushian, Michael B. Paulsen, 2016-03-18 This book examines the many ways in which economic concepts theories and models can be used to examine issues in higher education The topics explored in the book include how students make college going decisions the payoffs to students and society from going to college markets for higher education services demand and supply in markets for higher education why and how state and federal governments intervene in higher education markets college and university revenues and expenditures how institutions use net pricing strategies and non price product differentiation strategies to pursue their goals and to compete in higher education markets as well as issues related to faculty labor markets The book is written for both economists and non economists who study higher education issues and provides readers with background information and thorough explanations and illustrations of key economic concepts In addition to reviewing the contributions economists have made to the study of higher education it also examines recent research in each of the major topical areas The book is policy focused and each chapter analyses how contemporary higher education policies affect the behaviour of students faculty and or institutions of higher education Toutkoushian and Paulsen attempted a daunting task to write a book on the economics of higher education for non economists that is also useful to economists A book that could be used for reference and as a textbook for higher education classes in economics finance and policy They accomplish this tough balancing act with stunning success in a large volume that will serve as the go to place for anyone interested in the history and current thinking on the economics of higher education William E Becker Jr Professor Emeritus of Economics Indiana University

Homo Curator: Towards the Ethics of Consumption Péter Róna, László Zsolnai, Agnieszka Wincewicz-Price, 2024-02-20 This book explores the under researched sources of the consumerist culture and the environmental damage it has brought about The book is an outcome of the symposium on The Ethics of Consumption organised and hosted by the Las Casas Institute at the Blackfriars Hall University of Oxford as part of its Economics as a Moral Science Programme It takes on two contemporary problems the human weakness and capacity for wrong doing and the failure of modern economic theory to account for the moral character of human behaviour and its implicit encouragement of gluttonous life styles In a time when grand political schemes are proposed to revive sustainability of global economy the authors of the papers collected in this book highlight the need for moral renewal without which the most revolutionary structural reforms are bound to fail at producing the desired outcome Topics of the book include the meaning and sources of avarice the attempt to define what is enough exploration of philosophical and theological perspectives which can serve as
