Science as It Could Have Been Lena Soler, Emiliano Trizio, Andrew Pickering, 2016-02-19. Could all or part of our taken as established scientific conclusions, theories, experimental data, ontological commitments, and so forth have been significantly different? *Science as It Could Have Been* focuses on a crucial issue that contemporary science studies have often neglected: the issue of contingency within science. It considers a number of case studies, past and present, from a wide range of scientific disciplines: physics, biology, geology, mathematics, and psychology, to explore whether components of human science are inevitable or if we could have developed an alternative, successful science based on essentially different notions, conceptions, and results. Bringing together a group of distinguished contributors in philosophy, sociology, and history of science, this edited volume offers a comprehensive analysis of the contingency/inevitability problem and a lively and up-to-date portrait of current debates in science studies.

Novel Methods for Monitoring and Managing Land and Water Resources in Siberia Lothar Mueller, Askhad K. Sheudshen, Frank Eulenstein, 2015-11-15. This book presents an analysis of land and water resources in Siberia, initially characterizing the landscapes, their ecosystems, crucial processes, human impacts on soil and water quality, and the status quo of available research. Further chapters deal with modern monitoring and management methods that can lead to a significant knowledge shift and initiate sustainable soil and water resources use. These include soil hydrological laboratory measurement methods, process-based field evaluation methods for land and water quality, remote sensing, and GIS technology-based landscape monitoring methods, process and ecosystem modeling approaches, methods of resource and process evaluation, and functional soil mapping and tools for controlling agricultural land use systems. More than 15 of these concrete monitoring and management tools can immediately be incorporated into research and practice. Maintaining the functions of great landscapes for future generations will be the reward for these efforts.
