STRUCTURE AND FUNCTION OF CELLS

FIGURE 2.1 Here we see a specialised white blood cell attacking many small rod-shaped bacterial cells at the site of an infection. These white blood cells that are part of the body's immune system are produced in the bone marrow and travel via the bloodstream to sites of infection. While various cells have different functions, they share common structural features. In this chapter, we will explore the structure of cells and the passage of materials into cells.

KEY KNOWLEDGE

This chapter is designed to enable students to:

- investigate the defining characteristics of prokaryotic and eukaryotic cells
- identify cell structure and organisation
- identify cell organelles and understand their functions
- investigate the different modes of transport of materials across plasma membranes
- understand and apply the principle of the surface-area-to-volume ratio.

The Nature of Time J. Woods Halley, 2022-12-02 This book reviews and contrasts contemporary and historical perceptions of time from scientific and intuitive human points of view Ancient and modern clocks Augustinian ideas the deterministic Newtonian universe biological clocks deep time thermodynamics quantum mechanics and relativity all contribute to the perspective The focus is on what can be inferred from established technologies and science as opposed to futuristic speculation Chapter 1 describes clocks including the cesium atomic clocks establishing the current global time standard a history of clock development biological clocks phylogenetic trees radioactive dating and astronomical methods to determine the age of the universe Chapter 2 poses ancient questions about time not fully addressed by an understanding of the technical nature of clocks An early summary of some of these questions as described by Augustine in the 3rd century CE is followed by a description of how Newton 1300 years later introduced a conception of time which provided some answers such as the nature of an infinitesimally short present Implications concerning the reality of events in the past present and future are also discussed The Newtonian picture is contrasted with the intuitive human one and the possibilities of time travel and temporal recurrence are briefly discussed Chapter 3 introduces the second law of thermodynamics and addresses how it is compatible with a time reversible Newtonian description of a universe even though it appears to define an arrow of time The nature of entropy and its relation to coarse graining and emergence play a central role in the discussion Chapter 4 discusses ways in which quantum mechanics has altered the Newtonian perspective accounting for various interpretations of the meaning of quantum mechanics with regard to time Chapter 5 describes basic elements of special relativity and their implications for the nature of time Examples of time dilation and the changing order of space such as separated events in different frames are described The examples are chosen to avoid evocation of currently unattainable technologies An afterword in chapter 6 reviews questions raised by Augustine and summarizes how the development of science since then has addressed them This book was originally developed for an interdisciplinary seminar for beginning undergraduates at the University of Minnesota It uses a small amount of algebra mainly in supplementary appendices and does not assume any prior knowledge of physics chemistry biology or astronomy In contrast to many semipopular books on time it avoids speculation either about engineering techno optimism or physical theory strings loop quantum gravity black hole entropy Instead it takes a more grounded approach and describes what is currently known and not known to help both students and the general reader make better sense of time
