Glycoprotein: Sensor of the Microenvironment? Emanuela Felley-Bosco, Lisette Leyton, 2019-11-01 Thy1 CD90 is a small and heavily N glycosylated protein that was first identified on the cell surface of murine thymocytes Today it is known to be expressed in several other cell types including human fetal thymocytes hematopoietic stem cells some subsets of fibroblasts liver stem progenitor neurons glioblastoma mesothelium precursors and mesothelioma cells In some tissues Thy 1 CD90 plays a role in different processes such as cell adhesion interaction with extracellular matrix migration However despite the available insights to the function of the molecule we still require a better understanding of the processes that drive Thy1 CD90 expression and the consequences of its presence in cells as well as to what extent these functions are conserved between species The latter is especially relevant when thinking about possible translational studies In this Research Topic various aspects covering available and missing knowledge related to the molecular mechanisms controlling Thy1 CD90 expression and its role in physiological and pathological conditions are discussed High frontier win 05 , *The Dam*
