Privacy in Statistical Databases Josep Domingo-Ferrer, Yücel Saygin, 2008-09-22 Privacy in statistical databases is a discipline whose purpose is to provide solutions to the tension between the increasing social political and economical demand of accurate information and the legal and ethical obligation to protect the privacy of the various parties involved Those parties are the respondents the individuals and enterprises to which the database records refer the data owners those organizations spending money in data collection and the users the ones querying the database who would like their queries to stay confidential Beyond law and ethics there are also practical reasons for data collecting agencies to invest in respondent privacy if individual respondents feel their privacy guaranteed they are likely to provide more accurate responses Data owner privacy is primarily motivated by practical considerations if an enterprise collects data at its own expense it may wish to minimize leakage of those data to other enterprises even to those with whom joint data exploitation is planned Finally user privacy results in increased user satisfaction even if it may curtail the ability of the database owner to provide users There are at least two traditions in statistical database privacy both of which started in the 1970s one stems from official statistics where the discipline is also known as statistical disclosure control SDC and the other originates from computer science and database technology In official statistics the basic concern is respondent privacy *Contributions to Modern Econometrics* Ingo Klein, Stefan Mittnik, 2013-06-29 The field of econometrics has gone through remarkable changes during the last thirty five years Widening its earlier focus on testing macroeconomic theories it has become a rather comprehensive discipline concerned with the development of statistical methods and their application to the whole spectrum of economic data This development becomes apparent when looking at the biography of an econometrician whose illustrious research and teaching career started about thirty five years ago and who will retire very soon after his 65th birthday This is Gerd Hansen professor of econometrics at the Christian Albrechts University at Kiel and to whom this volume with contributions from colleagues and students has been dedicated He has shaped the econometric landscape in and beyond Germany throughout these thirty five years At the end of the 1960s he developed one of the first econometric models for the German economy which adhered closely to the traditions put forth by the Cowles commission Trade Credit and Temporary Employment Sebastian Nielen, 2016-04-08 This book presents an empirical investigation into the relationship between companies short term response to capital and labor market frictions and performance Two different kinds of performance measures are considered namely innovation performance and firm performance The author focuses on two major topics first on the relation between innovation performance and the use of trade credit Second on the relation between firm performance and the use of temporary employment The use of in depth firm level data and state of the art microeconomic methods provide the scientific rigor to this important investigation to answer the questions currently being confronted by many companies in different economies **Handbook of the Economics of International Migration** Barry Chiswick, Paul Miller, 2014-12-08

The economic literature on international migration interests policymakers as well as academics throughout the social sciences. These volumes, the first of a new subseries in the Handbooks in Economics, describe and analyze scholarship created since the inception of serious attention began in the late 1970s. This literature appears in the general economics journals in various field journals in economics especially but not exclusively those covering labor market and human resource issues in interdisciplinary immigration journals and in papers by economists published in journals associated with history sociology political science demography and linguistics among others. Covers a range of topics from labor market outcomes and fiscal consequences to the effects of international migration on the level and distribution of income and everything in between. Encompasses a wide range of topics related to migration and is multidisciplinary in some aspects which is crucial on the topic of migration. Appeals to a large community of scholars interested in this topic and for whom no overviews or summaries exist.
