Pyne,2007-10 As Stephen Pyne reveals in his biography few other scientists can match Grove Karl Gilbert's range of talents A premier explorer of the American West who made major contributions to the cascade of new discoveries about the earth Gilbert described two novel forms of mountain building invented the concept of the graded stream inaugurated modern theories of lunar origin helped found the science of geomorphology and added to the canon of conservation literature Gilbert knew most of geology's grand figures including John Wesley Powell Clarence Dutton and

Clarence King and Pyne's chronicle of the imperturbable quietly unconventional Gilbert is counterpointed with sketches of these prominent scientists. The man who wrote that happiness is sitting under a tent with walls uplifted just after a brief shower created answers to the larger questions of the earth in ways that have become classics of his science. **Relevant Chemistry Education** Ingo Eilks, Avi Hofstein, 2015-07-22 This book is aimed at chemistry teachers, teacher educators, chemistry education researchers and all those who are interested in increasing the relevance of chemistry teaching and learning as well as students' perception of it. The book consists of 20 chapters. Each chapter focuses on a certain issue related to the relevance of chemistry education. These chapters are based on a recently suggested model of the relevance of science education encompassing individual, societal and vocational relevance, its present and future implications as well as its intrinsic and extrinsic aspects. Two highly distinguished chemical educators, Ingo Eilks and Avi Hofstein, have brought together 40 internationally renowned colleagues from 16 countries to offer an authoritative view of chemistry teaching today. Between them, the authors in 20 chapters give an exceptional description of the current state of chemical education and signpost the future in both research and in the classroom. There is special emphasis on the many attempts to enthuse students with an understanding of the central science, chemistry, which will be helped by having an appreciation of the role of the science in today's world. Themes which transcend all education, such as collaborative work, communication skills, attitudes, inquiry, learning and teaching, and problem solving, are covered in detail and used in the context of teaching modern chemistry. The book is divided into four parts which describe the individual, the societal, the vocational and economic, and the non-formal dimensions, and the editors bring all the disparate leads into a coherent narrative that will be highly satisfying to experienced and new researchers and to teachers with the daunting task of teaching such an intellectually demanding subject. Just a brief glance at the index and the references will convince anyone interested in chemical education that this book is well worth studying. It is scholarly and readable and has tackled the most important issues in chemical education today and in the foreseeable future. Professor David Waddington, Emeritus Professor in Chemistry Education, University of York, United Kingdom. **Theoretical and Computational Photochemistry** García Iriepa, Cristina, Marco Marazzi, 2023-04-21 Theoretical and Computational Photochemistry: Fundamentals, Methods, Applications and Synergy with Experimental Approaches provides a comprehensive overview of photoactive systems and photochemical processes.
