Grating-Based X-Ray Phase-Contrast Mammography Kai Hermann Scherer, 2016-06-06 This thesis offers an accessible guide to biomedical phase contrast imaging with over 20 radiographic illustrations It focuses on research to improve radiography and particularly mammography applications by using a novel X ray imaging modality that exploits the wave nature of X rays rather than just their absorption in tissue Further it explores a broad range of potential applications from the assessment of breast cancer and the evaluation of microcalcification clusters to the examination of renal stones X ray imaging is an indispensable tool in modern medical diagnostics and ranges from simple radiography applications to advanced CT imaging protocols This novel phase contrast approach has the potential to deliver significantly improved diagnostic information also and especially in cases where mammography is used for screening purposes The thesis is based on several studies conducted by the author working in close interdisciplinary cooperation with medical doctors at two university clinics in Munich and successfully demonstrates this diagnostic potential in pre clinical experiments LANGE

A comparative review of the Quality Control (QC) test protocols in the American College of Radiology (ACR) mammography QC manual and the International Atomic Energy Agency (IAEA) quality assurance programme for screen film mammography manual Karl Joy C. Acaba, 2015 Mammography is the most used modality for breast cancer screening and diagnosis However since ionizing radiation has been classified as a carcinogen and since the breast is sensitive to low radiation doses quality control QC of the mammographic imaging chain is essential The study aims to develop a national protocol for QC tests for screen film

mammography SFM It provides a comprehensive analysis of the two most prominent guidance documents for QC in SFM QC tests were compared in terms of the ease in the acquisition of the specified recommended devices and tools to be used the importance of the test and the ease in carrying out the test procedures The measured and calculated results were assessed as to whether they met the recommended performance criteria The difference in the performance criteria between the ACR and the IAEA for each test was analyzed If there was a failed test result corrective maintenance was done based on the suggested corrective action in the test protocol Data gathering was done at the Breast Imaging Unit of Benavides Cancer Institute University of Santo Tomas Hospital Several QC tests were found to be common to both protocols A few QC tests were found to be present only in either ACR or IAEA protocols Eight 8 common tests were found in the radiologic technologist s list of tasks and sixteen 16 common tests in the medical physicist s list Majority of the tests had significant differences in their acceptability criteria Further there were two additional QC tests found only in the IAEA protocol the test of system constancy by the radiologic technologist and the test of radiation leakage by the medical physicist The proposed protocol was developed based on the results of the study It could serve as a reference for use by the DOH Technical Working Group TWG tasked to review the technical specifications of and the performance test protocols for SFM equipment
