

4. Pull the starter rope firmly until resistance is felt, then pull briskly.

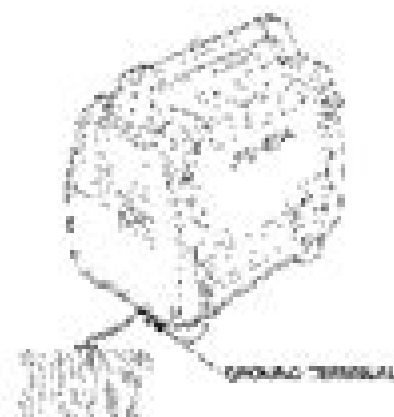

CAUTION: Do not allow the starter grip to snap back against the generator. Return it gently to prevent damage to the housing.

NOTE: Make sure the pilot lamp comes on. If not, the lamp may be burnt out.

5. Move the choke lever to OFF as the engine starts up.

WARNING: To prevent electrical shock from power appliances, the generator should be grounded. Connect a length of heavy wire between the ground terminal and the ground source.

CAUTION:

- Limit operation requiring maximum power 850 VA to 30 minutes. For continuous operation, do not exceed the rated power of 550 VA.
- Most appliance motors require more than their rated wattage for startup.
- Do not exceed the current limit specified for any output.
- Do not connect the generator to a household circuit. This could cause damage to the generator or to electrical appliances in the house.
- When using AC and DC output simultaneously, do not exceed 300 VA in the load connected to the AC receptacle. An AC load exceeding 300 VA may not trip the circuit protector but when added to the DC load, it may shorten the service life of the generator.

NOTE: You can determine an appliance's VA (volt amp) rating by multiplying its required voltage by the amount of current (amps) it draws.

Honda Generator Em650z Winding Diagram
