Valerie didn't expect during her year abroad was how much she fell in love with her adopted country and how difficult it was to adjust to life once she came back to the States. It's Worth the Sacrifice chronicles her student missionary SM experience and offers advice to those interested in going overseas. Valerie hopes that what she learned will help other SMs while serving and during re-entry.

How the Leopard Changed Its Spots Brian Goodwin, 2020-09-01 Do genes explain life? Can advances in evolutionary and molecular biology account for what we look like, how we behave, and why we die? In this powerful intervention into current biological thinking, Brian Goodwin argues that such genetic reductionism has important limits. Drawing on the sciences of complexity, the author shows how an understanding of the self-organizing patterns of networks is necessary for making sense of nature. Genes are important but only as part of a process constrained by environment, physical laws, and the universal tendencies of complex adaptive systems. In a new preface for this edition, Goodwin reflects on the advances in both genetics and the sciences of complexity since the book's original publication.

Mathematical Biology James D. Murray, 2013-03-09 Mathematical biology, the use of mathematical ideas and models in the biosciences, is a fast-growing, very exciting, and increasingly important interdisciplinary field. This textbook is an account of some of the major techniques and models used, and of some genuine practical applications drawn from current areas of research interest, for example, population ecology, developmental biology, physiology, epidemiology, and evolution. It provides the reader with a thorough background sufficient to start genuine interdisciplinary collaborative research with biomedical scientists.
