Period:

1. Describe early ideas about heredity. Include a description of Mendel's experimental procedures, results and conclusions.
2. What was significant about Mendel's work? How did Mendel's experiment contribute to our understanding of genetics?
3. Define the following terms as they relate to genetics: *gene*, *allele*, *dominant*, *recessive*, *homozygous*, *heterozygous*, *genotype* and *phenotype*.
Describe how of Punnett squares are be used to predict inheritance.
4. For peas, round seed shape (R) is dominant to wrinkled seed shape (r). A homozygous dominant plant is crossed with a heterozygous plant. Draw and complete a Punnett square and include the expected percents and ratios for genotype and phenotype of the offspring.
5. Explain sex-linked traits.
6. What gender is more likely to express a sex-linked recessive trait? Why?
7. What is the human genome?
8. Define *monosomy* and *trisomy*.
9. What condition causes Down Syndrome?
10. Explain the basic structure of DNA.

12. What is the difference between chromosomal disorders and genetic disorders?
13. What are dysfunctional genes?
14. What is nondisjunction?
15. Be able to read a pedigree. Example:

Marfan syndrome, a dominant trait, is an inherited condition that affects the connective tissue, resulting in unusually long bones and spinal curvature, as well as vision, cardiac, and respiratory problems. The following pedigree shows inheritance of Marfan syndrome in a multigenerational family. Shaded individuals have the syndrome.

You should be able to label the genotype of all individuals.

- a) What is the genotype of the parents? b) Can you determine individual II-4's genotype? Explain.

Zimbardo,1997 Psychology Third Edition builds upon the experience and reputations of Phil Zimbardo and Ann Weber with the addition of a new co author Bob Johnson who has a wealth of teaching experience at the community college level This briefer less expensive book presents psychology in a meaningful manageable format that focuses on the key questions and core concepts of psychology Introductory psychology covers such a wide range of topics and issues that it becomes difficult for readers to see the forest for the trees To make key psychological concepts more meaningful the authors found inspiration in a classic chess study This study showed that experts did no better than novices at remembering the location of pieces on a chess board when they were placed randomly Only when the patterns represented actual game situations did they make sense and therefore become more easily memorable for the experts Clearly meaningful patterns are easier to remember and understand than random arrangements and Psychology applies this by presenting the field of psychology in meaningful patterns to enhance comprehension These concepts are then applied to readers own lives study skills and the world around them Finally Psychology integrates a cross cultural and multicultural perspective to make psychology meaningful for everyone For anyone interested in Introductory Psychology **Resources in Education** ,1998
