Langlais,David A. Reckhow,Deborah R Brink,2019-07-16 With the advent of the Safe Drinking Water Act Amendments of
1986 many water utilities are reexamining their water treatment practices Upcoming new regulations on disinfection and on
disinfection by products in particular are the primary driving forces for the big interest in ozone It appears that ozone with
its strong disinfection capabilities and apparently lower levels of disinfection by products compared to other disinfectants
may be the oxidant disinfectant of choice Many utilities currently using chlorine for oxidation may need to switch due to
chlorine by product concerns Utilities using chloramines may need to use ozone to meet CT requirements This book prepared
by 35 international experts includes current technology on the design operation and control of the ozone process within a
drinking water plant It combines almost 100 years of European ozone design and operating experience with North American
design operations experience and the North American regulatory and utility operational environment Topics covered include
ozone chemistry toxicology design consideration engineering aspects design of retrofit systems and the operation and
economics of ozone technology The book contains a how to section on ozone treatability studies which explains what
information can be learned using treatability studies at what scale bench pilot or demonstration plant and how this
information can be used to design full scale systems It also includes valuable tips regarding important operating practices as
well as guidance on retrofits and the unique issues involved with retrofitting the ozone process With ozone being one of the
hottest areas of interest in drinking water this book will prove essential to all water utilities design engineers regulators and
plant managers and supervisors Railway Gazette. [Weekly]. ,1962
