

INTRODUCTION

GENERAL

This section has a description and the repair procedures for the single and double-reach carriages on 2-stage or 3-stage masts of the N30-40-45FR lift trucks.

DESCRIPTION

(See FIGURE 1., FIGURE 2. and FIGURE 3.)

The reach carriages are used to extend the reach of the carriage. There are two types of reach carriages. There is a single-reach carriage with one set of scissor arms. The other carriage has two sets of scissor arms for dou-

ble-reach. Both carriages have a tilt cylinder to tilt the forks. Each carriage can also have the optional side-shift function. The parts of the reach carriages are shown in FIGURE 1. The inner and outer frame assemblies are connected by a scissor linkage. The top of the scissor arm weldment at the inner frame is fastened to the top of the inner frame by pins. The top of each scissor arm at the outer frame or apron is fastened to the top of the frame or apron by pins. On double reach units, the ends of each set of scissor arms and scissor arm weldments are fastened together by studs with bearings. The bearings on each pin or stud permit the arms to pivot. Large bearings at the center pivot of each scissor arm and scissor arm weldment also permit the linkage to pivot.
