José Luis Valverde

Ios 703 Problems:

The Problem of Herbal Medicines Legal Status José Luis Valverde,1999 The main problem in the use of medicinal plants discussed in this book is that citizens are being persuaded that herbal medicine is based on its low or even absent toxicology A good efficacy is assumed as self evident and therapeutic benefit without risks is expected Many users prefer natural medicine instead of synthetic remedies However the number of reports on unwanted side effects of phytomedicines increased in the last years In some instances a lack of pharmaceutical quality was found The unqualified recommendation of herbal medicines may represent a considerable risk to the user The use of a herbal remedy with unproven efficacy can represent a risk for the user when a more effective and necessary treatment will therefore be stopped or omitted These circumstances must be taken into account by the governments inspection services the doctors and the judges The present approach to herbal medicines and fraud with these products do not receive the necessary punishment because it is believed that if the product does not have any therapeutic property it cannot entail any harm either Advanced Tools and Methods for Treewidth-Based Problem Solving M. Hecher,2022-11-15 This book Advanced Tools and Methods for Treewidth Based Problem Solving contains selected results from the author s PhD studies which were carried out from 2015 to 2021 For his PhD thesis Markus Hecher received the EurAI Dissertation Award 2021 and the GI Dissertation Award 2021 amongst others The aim of the book is to present a new toolkit for using the structural parameter of treewidth to solve problems in knowledge representation and reasoning KR and artificial intelligence AI thereby establishing both theoretical upper and lower bounds as well as methods to deal with treewidth efficiently in practice The key foundations outlined in the book provide runtime lower bounds under reasonable assumptions in computational complexity for evaluating quantified Boolean formulas and logic programs which match the known upper bounds already published in 2004 and 2009 The general nature of the developed tools and techniques means that a wide applicability beyond the selected problems and formalisms tackled in the book is anticipated and it is hoped that the book will serve as a starting point for future theoretical and practical investigations which will no doubt establish further results and gain deeper insights Multi-problem Violent Youth Raymond R. Corrado,2002 Annotation In the first product of an Advanced Research Workshop held in Cracow Poland from August to September 2000 criminologists psychologists and other professionals cover risk factors assessment issues selected legal and management issues and a conceptual framework for the risk needs management instrument The workshop considered the development of a procedure for assessing risk and needs factors for serious antisocial behavior especially violence by children and adolescents that procedure is intended to become the basis of ongoing international collaborative research projects There is no subject index Annotation c 2003 Book News Inc Portland OR booknews com

Distributed Constraint Problem Solving and Reasoning in Multi-agent Systems Weixiong Zhang,Volker Sorge,2004

Distributed and multi agent systems are becoming more and more the focus of attention in artificial intelligence research and have already found their way into many practical applications An important prerequisite for their success is an ability to flexibly adapt their behavior via intelligent cooperation Successful reasoning about and within a multiagent system is therefore paramount to achieve intelligent behavior Distributed Constraint Satisfaction Problems DCSPs and Distributed Constraint Optimization minimization Problems DCOPs are perhaps ubiquitous in distributed systems in dynamic environments Many important problems in distributed environments and systems such as action coordination task scheduling and resource allocation can be formulated and solved as DCSPs and DCOPs Therefore techniques for solving DCSPs and DCOPs as well as strategies for automated reasoning in distributed systems are indispensable tools in the research areas of distributed and multi agent systems They also provide promising frameworks to deal with the increasingly diverse range of distributed real world problems emerging from the fast evolution of communication technologies The volume is divided in two parts One part contains papers on distributed constraint problems in multi agent systems The other part presents papers on Agents and Automated Reasoning

Early Hydatid Diagnosis: A Problem to be solved Alyaa Farid,Azza El Amir,2015-12-07 Human cystic hydatid disease CHD caused by the larval stage hydatid cyst of the dog tapeworm *E. granulosus* is a major infection with worldwide distribution and variable geographical incidence The present study evaluates the two most popular techniques sandwich ELISA and Latex techniques for the diagnosis of human

hydatidosis by antigen detection In the present study crude protoscolex antigen CPA detection was carried out through several steps including the preparation of protoscoleces antigen production purification and labeling of rabbit IgG pAb The Latex technique and ELISA tests have been found to be high sensitive and suitable for the antigen detection of cystic hydatid disease In conclusion antigen detection assay is superior and more sensitive than antibody detection assay especially in diagnosing active infection where hydatid cysts are predominant Antigen detection assay might be a useful approach for assessment of the efficacy of treatment especially after removal of the cyst Further studies are recommended to improve the diagnostic efficacy of antigen based ELISA method Sandwich ELISA and Latex techniques appear to be sufficiently sensitive assays for the detection of human echinococcosis *Year 2000 Problem* Leon A.
