Super-Resolution for Remote Sensing Applications Using Deep Learning Techniques G. Rohith,G. Lakshmi Sutha,2022-12-14 Satellite image processing is crucial in detecting vegetation clouds and other atmospheric applications Due to sensor limitations and pre processing remotely sensed satellite images may have interpretability concerns as to specific portions of the image making it hard to recognise patterns or objects and posing the risk of losing minute details in the image

Existing imaging processors and optical components are expensive to counterfeit have interpretability issues and are not necessarily viable in real applications This book exploits the usage of deep learning DL components in feature extraction to boost the minute details of images and their classification implications to tackle such problems It shows the importance of super resolution in improving the spatial details of images and aiding digital aerial photography in pan sharpening detecting signatures correctly and making precise decisions with decision making tools
