Chinatown Unbound , Kay Anderson,Ien Ang,Andrea Del Bono,Donald McNeill,, Alexandra Wong,2019-01-25 Chinatowns are familiar places in almost all major cities in the world In popular Western wisdom the restaurants pagodas and red lanterns are intrinsically equated with a self contained immigrant Chinese district an alien enclave of the East in the West By the 1980s when these Western societies had largely given up their racially discriminatory immigration policies and opened up to Asian immigration the dominant conception of Chinatown was no longer that of an abject ethnic ghetto rather Chinatown was now seen as a positive expression of multicultural heritage and difference By the early 21st century however these spatial and cultural constructions of Chinatown as an other space whether negative or positive have been thoroughly destabilised by the impacts of accelerating globalisation and transnational migration This book provides a timely and much needed paradigm shift in this regard through an in depth case study of Sydney s Chinatown It speaks to the growing multilateral connections that link Australia and Asia and especially China together not just economically but also socially and culturally as a consequence of increasing transnational flows of people money ideas and things Further the book elicits a particular sense of a place in Sydney s Chinatown that of an interconnected world in which Western and Asian realms inhabit each other and in which the orientalist legacy is being reconfigured in new deployments and more complex delimitations As such Chinatown Unbound engages with and contributes to making sense of the epochal shift in the global balance of power towards Asia especially China

Planning and Analyzing Teaching
Angelika Kullberg,Åke Ingerman,Ference Marton,2024-01-24 Using illustrative teaching case studies this book demonstrates how teaching informed by a learning theory specifically Variation theory can equip teachers to facilitate possibilities for students learning in effective and powerful ways For a long period of time teaching has been black boxed in favour of other explanations of why students learn or not such as motivation and social interaction A large amount of research on teaching and learning not the least made using Variation theory has shown that students often need to experience the same aspects of the focused content or capability in order to learn indicating that relationships between teaching and learning are not unique or even qualitatively different for every individual and every situation This perspective on the relationship between teaching and learning emphasizes content specific aspects and in that sense structural components of teaching while other aspects of schooling such as social interaction and general well being recede into the background The authors argue for the importance of this in the direct development of teachers independent collective professional knowledge about teaching and the leverage this gives for developing student learning They introduce theoretical tools to help teachers to increase the probability that

teaching focusing a specific content or capability is predictive of students learning of that specific content or capability while decreasing contextual dependency without assuming that teaching and learning have a one to one relationship Intended for teachers graduate students in education teacher educators student teachers and researchers this book shows that while there is no simple equation between teaching and learning there are general though content specific aspects of teaching that can be systematically planned and analyzed and used to improve the quality of student learning The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license
