Wilmers, 2011-10-10 This proceedings volume contains most of the invited talks presented at the colloquium The main topics treated are the model theory of arithmetic and algebra the semantics of natural languages and applications of mathematical logic to complexity theory The volume contains both surveys by acknowledged experts and original research papers presenting advances in these disciplines Logic Colloquium '84 J. B. Paris, Alec J. Wilkie, G. M. Wilmers, 1986 This proceedings volume contains most of the invited talks presented at the colloquium The main topics treated are the model theory of arithmetic and algebra the semantics of natural languages and applications of mathematical logic to complexity theory The volume contains both surveys by acknowledged experts and original research papers presenting advances in these disciplines **Logic Colloquium '84**, 1986 **Logical Methods** John N. Crossley, Jeffrey B. Remmel, Richard Shore, Moss E. Sweedler, 2012-12-06 The twenty six papers in this volume reflect the wide and still expanding range of Anil Nerode's work A conference on Logical Methods was held in honor of Nerode's sixtieth birthday 4 June 1992 at the Mathematical Sciences Institute Cornell University 1 3 June 1992 Some of the conference papers are here but others are from students co workers and other colleagues The intention of the conference was to look forward and to see the directions currently being pursued in the development of work by or with Nerode Here is a brief summary of the contents of this book We give a retrospective view of Nerode's work A number of specific areas are readily discerned recursive equivalence types recursive algebra and model theory the theory of Turing degrees and recursive sets polynomial time computability and computer science Nerode began with automata theory and has also taken a keen interest in the history of mathematics All these areas are represented The one area missing is Nerode's applied mathematical work relating to the environment Kozen's paper builds on Nerode's early work on automata Recursive equivalence types are covered by Dekker and Barback the latter using directly a fundamental metatheorem of Nerode Recursive algebra is treated by Ge Richards group representations Recursive model theory is the subject of papers by Hird Moses and Khoussainov Dadajonov while a combinatorial problem in recursive model theory is discussed in Cherlin Martin's paper Cenzer presents a paper on recursive dynamics Metamathematics of First-Order Arithmetic Petr Hájek, Pavel Pudlák, 2017-03-02 A much needed monograph on the metamathematics of first order arithmetic paying particular attention to fragments of Peano arithmetic Fewnomials A. G. Khovanskiĭ, The ideology of the theory of fewnomials is the following real varieties defined by simple not cumbersome systems of equations should have a simple topology One of the results of the theory is a real transcendental analogue of the Bezout theorem for a large class of systems of k transcendental equations in k real variables the number of roots is finite and can be explicitly estimated from above via the complexity of the system A more general result is the construction of a category of real transcendental manifolds that resemble algebraic varieties in their properties These results give new information on level sets of elementary

functions and even on algebraic equations The topology of geometric objects given via algebraic equations real algebraic curves surfaces singularities etc quickly becomes more complicated as the degree of the equations increases It turns out that the complexity of the topology depends not on the degree of the equations but only on the number of monomials appearing in them This book provides a number of theorems estimating the complexity of the topology of geometric objects via the cumbersomeness of the defining equations In addition the author presents a version of the theory of fewnomials based on the model of a dynamical system in the plane Pfaff equations and Pfaff manifolds are also studied Current Trends In

Motivic Integration and its Interactions with Model Theory and Non-Archimedean Geometry: Volume 1 Raf Cluckers,Johannes Nicaise,Julien Sebag,2011-09-22 The development of Maxim Kontsevich s initial ideas on motivic integration has unexpectedly influenced many other areas of mathematics

ranging from the Langlands program over harmonic analysis to non Archimedean analysis singularity theory and birational geometry This book assembles the different theories of motivic integration and their applications for the first time allowing readers to compare different approaches and assess their individual strengths All of the necessary background is provided to make the book accessible to graduate students and researchers from algebraic geometry model theory and number theory

Applications in several areas are included so that readers can see motivic integration at work in other domains In a rapidly evolving area of research this book will prove invaluable This first volume contains introductory texts on the model theory of valued fields different approaches to non Archimedean geometry and motivic integration on algebraic varieties and non

Modules Mike Prest,1988-02-25 In recent years the interplay between model theory and other branches of mathematics has led to many deep and intriguing results In this the first book on the topic the theme is the interplay between model theory

and the theory of modules The book is intended to be a self contained introduction to the subject and introduces the requisite model theory and module theory as it is needed Dr Prest develops the basic ideas concerning what can be said about modules using the information which may be expressed in a first order language Later chapters discuss stability theoretic aspects of modules and structure and classification theorems over various types of rings and for certain classes of modules Both algebraists and logicians will enjoy this account of an area in which algebra and model theory interact in a significant way The book includes numerous examples and exercises and consequently will make an ideal introduction for graduate students coming to this subject for the first time
