Collaborative and Distributed Processes in Contemporary Music-Making Richard Glover, Lauren Redhead, 2020-04-09 This volume represents the second proceedings of the Royal Musical Association's RMA Music and as Process Study Group It is not surprising that a large number of the contributors to the Music and as Process Study Group are active practitioners in the performance and composition of contemporary music The collaborations documented here represent the bringing together of disciplines joint work between practitioners who contribute their own specific areas of expertise to a composite creative activity and work that crosses disciplines in order to make a critical comment in each of them In this collection these three types of collaborative work describe an increasing amount of contemporary music practice In addition to the increasing involvement of practice in research the understanding and prevalence of practice methodologies in the form of practice

research has also increased in musicology This volume reflects these concerns through contributions from authors who are all active practitioners in their respective fields of music performance composition improvisation and conducting The diversity of these contributions shows the variety of processes and practices that are currently being undertaken by proponents of the field of contemporary music These essays provide a snapshot of the current collaborative and distributed processes that are employed by today's contemporary music practitioners The chapters contained in this volume reveal the varied nature of the approaches to creativity in music making and the ways that these are distributed across its practitioners during each stage of the development of musical works Mixing Music Russ Hepworth-Sawyer, Jay Hodgson, 2016-12-01

Capturing recording and broadcasting the voice is often difficult Many factors must be taken into account and achieving a true representation is much more complex than one might think The capture devices such as the position of the singer's or narrator's the acoustics atmosphere and equipment are just some of the physical aspects that need to be mastered Then there is the passage through the analog or digital channel which disrupts the audio signal as well as the processes that are often required to enrich improve or even transform the vocal timbre and tessitura While in the past these processes were purely material today digital technologies and software produce surprising results that every professional in recording and broadcasting should know how to master Recording and Voice Processing 1 addresses some general theoretical concepts A history of recording and the physiology of the vocal apparatus are detailed in order to give the reader an understanding of the fundamental aspects of the subject This volume also includes an advanced study of microphones addressing their characteristics and typologies The acoustic environment and its treatment are also considered in terms of the location of the sound capture whether in a home studio recording studio live or natural environment in order to achieve a satisfactory sound recording *Pop Music Production* Phil Harding, 2019-06-28
