National Subcommissions of ICMI and their Role in the Reform of Mathematics Education Alexander Karp, 2019-05-09 ICMI or IMUK was founded in 1908 and initiated the establishment of national subcommissions to launch national activities in response to the IMUK agenda and to promote the reform proposals within each member country While ICMI s activities were thoroughly studied the activities of the national subcommissions are studied only very marginally In the meantime their work has been of major importance both because of their role in exploring and documenting the development of mathematics education at the beginning of the 20th century and because of the changes and new ideas which they brought to their countries Importantly even if some results of their activities were analyzed within their countries in the corresponding languages almost nothing is known internationally This book is planned to deepen our knowledge on at least some of the national subcommissions The book will interest both researchers and others interested in mathematics education and its development

Explanation and Proof in Mathematics Gila Hanna, Hans Niels Jahnke, Helmut Pulte, 2009-12-04 In the four decades since Imre Lakatos declared mathematics a quasi empirical science increasing attention has been paid to the process of proof and argumentation in the field a development paralleled by the rise of computer

technology and the mounting interest in the logical underpinnings of mathematics. Explanation and Proof in Mathematics assembles perspectives from mathematics education and from the philosophy and history of mathematics to strengthen mutual awareness and share recent findings and advances in their interrelated fields. With examples ranging from the geometers of the 17th century and ancient Chinese algorithms to cognitive psychology and current educational practice, contributors explore the role of refutation in generating proofs, the varied links between experiment and deduction, the use of diagrammatic thinking in addition to pure logic, and the uses of proof in mathematics education, including a critique of authoritative versus authoritarian teaching styles. A sampling of the coverage: The conjoint origins of proof and theoretical physics in ancient Greece; Proof as bearers of mathematical knowledge; Bridging knowing and proving in mathematical reasoning; The role of mathematics in long term cognitive development of reasoning; Proof as experiment in the work of Wittgenstein; Relationships between mathematical proof, problem solving and explanation. Explanation and Proof in Mathematics is certain to attract a wide range of readers including mathematicians, mathematics education professionals, researchers, students and philosophers and historians of mathematics.

Publications United States. National Bureau of Standards, 1969. *Selected Papers of Demetrios G. Magiros*. S.G. Tzafestas, 2012-12-06. The theory of nonlinear oscillations and stability of motion is a fundamental part of the study of numerous real world phenomena. These phenomena, particularly auto oscillations of the first and second kind, capture parametric subharmonic and ultraharmonic resonance asymptotic behavior and orbits stability constitute the core of problems treated in Nonlinear Mechanics and their study is connected with the names of H. Poincaré, A. M. Lyapunov, N. M. Krylov and N. N. Bogolyubov. Professor Demetrios Magiros, a widely known scientist in the theories of oscillations and nonlinear differential equations, has devoted his numerous works to this significant part of modern physical science. His scientific results can be classified in the following way: 1. creation of methods of analysis of subharmonic resonances under the nonlinear effect; 2. determination and analysis of the main modes of nonlinear oscillations on the basis of infinite determinants; 3. analysis of problems of celestial mechanics; 4. classification of stability of solutions of dynamic systems; concepts; 5. mathematical analogs of physical and social systems. He has developed new methods and solutions for a great number of difficult problems of nonlinear mechanics, making a significant contribution to the theory and applications of the field. Urgency, depth of perception of the considered phenomena and practical directness are characteristics of his work.
