Cyanobacteria: The Green E. coli Anne M Ruffing, Toivo Kallas, 2016-03-16 As the world struggles to reduce its dependence on fossil fuels and curb greenhouse gas emissions industrial biotechnology is also going green Escherichia coli has long been used as a model Gram negative bacterium not only for fundamental research but also for industrial applications Recently however cyanobacteria have emerged as candidate chassis for the production of commodity fuels and chemicals utilizing CO₂ and sunlight as the main nutrient requirements In addition to their potential for reducing greenhouse gas emissions and lowering production costs cyanobacteria have naturally efficient pathways for the production metabolites such as carotenoids which are of importance in the nutraceutical industry The unique metabolic and regulatory pathways present in cyanobacteria present new challenges for metabolic engineers and synthetic biologists Moreover their requirement for light and the dynamic regulatory mechanisms of the diurnal cycle further complicate the development and application of cyanobacteria for industrial applications Consequently significant advancements in cyanobacterial engineering and strain development are necessary for the development of a green E coli This Research Topic will focus on cyanobacteria as organisms of emerging industrial relevance including research focused on the development of

genetic tools for cyanobacteria the investigation of new cyanobacterial strains the construction of novel cyanobacterial strains via genetic engineering the application of omics tools to advance the understanding of engineered cyanobacteria and the development of computational models for cyanobacterial strain development **Ruling Reptiles** Holly Noelle Woodward Ballard, James O. Farlow, 2023-09-05 Modern crocodylians crocodiles alligators caiman Central and South America and gharials India have evolved over 250 million years from a fully terrestrial bipedal ancestor Along with birds crocodylians are the only living members of Archosauria the group including nonavian dinosaurs Ruling Reptiles features contributions on a broad range of topics surrounding crocodylian evolution and biology including osteology osteohistology developmental biology myology odontology functional morphology allometry body size estimation taphonomy parasitology ecology thermophysiology and ichnology It demonstrates how the wide variety of these studies can also provide crucial insights into dinosaurian biology and evolution Featuring the latest findings and interpretations Ruling Reptiles Crocodylian Biology and Archosaur Paleobiology is an essential resource for zoologists biologists and paleontologists The Runes of Evolution Simon Conway Morris, 2015-06-30 How did human beings acquire imaginations that can conjure up untrue possibilities How did the Universe become self aware In The Runes of Evolution Simon Conway Morris revitalizes the study of evolution from the perspective of convergence providing us with compelling new evidence to support the mounting scientific view that the history of life is far more predictable than once thought A leading evolutionary biologist at the University of Cambridge Conway Morris came into international prominence for his work on the Cambrian explosion especially fossils of the Burgess Shale and evolutionary convergence which is the process whereby organisms not closely related not monophyletic independently evolve similar traits as a result of having to adapt to similar environments or ecological niches In The Runes of Evolution he illustrates how the ubiquity of convergence hints at an underlying framework whereby many outcomes not least brains and intelligence are virtually guaranteed on any Earth like planet Conway Morris also emphasizes how much of the complexity of advanced biological systems is inherent in microbial forms By casting a wider net The Runes of Evolution explores many neglected evolutionary questions Some are remarkably general Why for example are convergences such as parasitism carnivory and nitrogen fixation in plants concentrated in particular taxonomic hot spots Why do certain groups have a particular propensity to evolve toward particular states Some questions lead to unexpected evolutionary insights If bees sleep as they do do they dream Why is that insect copulating with an orchid Why have sponges evolved a system of fiber optics What do mantis shrimps and submarines have in common If dinosaurs had not gone extinct what would have happened next Will a saber toothed cat ever re evolve Cona Morris observes Even amongst the mammals let alone the entire tree of life humans represent one minute twig of a vast and largely fossilized arborescence Every living species is a linear descendant of an immense string of now vanished ancestors but evolution itself is the very reverse of linear Rather it is endlessly exploratory probing the vast spaces of biological hyperspace Indeed this book is a celebration of how our world is and was

populated by a riot of forms a coruscating tapestry of life The Runes of Evolution is the most definitive synthesis of evolutionary convergence to be published to date EcoLaw Margaret Davies,2022-05-01 This book re imagines law as ecolaw The key insight of ecological thinking that everything is connected to everything else at least on the earth and possibly in the cosmos has become a truism of contemporary theory Taking this insight as a starting point for understanding law involves suspending theoretical certainties and boundaries It involves suspending theory itself as a conceptual project and practicing it as an embodied and material project Although an ecological imagining of law can be metaphorical and can be highly imaginative and suggestive this book shows that it is also literal Law is part of the material everything that is connected to everything else This means that once the previous certainties of legal thinking have been dismantled it is after all possible to think of law as natural as embedded in and emergent from a normative biophysical nature The book proposes that there exists a natural nomos animals plants and Earth systems that produce their own values and norms from which human norms and laws emerge This book then proposes a new way to understand law and pursues specific arguments to demonstrate the feasibility of law as ecolaw Drawing inspiration from current trends in the post humanities socioecological thought and developments across the natural sciences in their specific intersections with humanities and social science disciplines this book will appeal both to legal theorists and to others with interests in these areas Molyneux's Question and the History of Philosophy Gabriele Ferretti,Brian Glenney,2020-09-15 In 1688 the Irish scientist and politician William Molyneux sent a letter to the philosopher John Locke In it he asked him a question could someone who was born blind and able to distinguish a globe and a cube by touch be able to immediately distinguish and name these shapes by sight if given the ability to see The philosophical puzzle offered in Molyneux s letter fascinated not only Locke but major thinkers such as Leibniz Berkeley Diderot Reid and numerous others including psychologists and cognitive scientists today Does such a question represent a philosophical puzzle or a problem that can be solved by experimental tests Can vision be fully restored after blindness What is the relation between vision and touch Are the senses linked through learning or bound at birth Molyneux s Question and the History of Philosophy is a major collection of essays that explore the long standing issues Molyneux s problem presents to philosophy of mind perception and the senses In addition the volume considers the question from an interdisciplinary angle examines the pre history of the question and aspects of it that have been ignored such as perspectives from religion and disability As such Molyneux s Question and the History of Philosophy presents a set of philosophically rich empirically informed and scientifically rigorous original investigations into this famous puzzle It will be of great interest to students and researchers in philosophy psychology and the cognitive sciences including neuroscience neurobiology and ophthalmology as well as those studying the mind perception and the senses
