11. Given 2 triangles with the same base and height, find the area of the larger triangle.

$$\text{Area of Triangle ABC} = \frac{1}{2} \times \text{base} \times \text{height} = \frac{1}{2} \times 12 \times 10 = 60$$

12. The area of a rectangle is 48 square units. The length is 8 units. Find the width.

$$\text{Area} = \text{length} \times \text{width} \Rightarrow 48 = 8 \times \text{width} \Rightarrow \text{width} = \frac{48}{8} = 6$$

13. The area of a rectangle is 48 square units. The length is 8 units. Find the width.

ENC Focus ,2000 Sourcebook of Rehabilitation and Mental Health Practice David P. Moxley, John R. Finch, 2006-04-11 We live in a day and age in which many fields come together to define new ones and out of these newly defined areas come innovative practices and emergent ways of thinking The Sourcebook on Rehabilitation and Mental Health Practice documents one of these new fields

one formed by the coalescence of rehabilitative and mental health services and employment Only recently have human service practitioners policy makers and administrators recognized that there is a growing synergy among these areas once separated by great gulfs of differences in culture perspectives and values and technologies It is not happenstance that rehabilitation mental health and employment are becoming increasingly integrated in contemporary human services There is considerable interest in work in contemporary society although different values and perspectives mediate this interest For people with disabilities an interest in work often comes from deep frustration from not having ready access to work and from not having enough of it to facilitate an acceptable quality of life or independent living Some people find work to be a source of problems that negatively affects their functioning They find the workplace stressful and unsupportive or they feel that work exacts too much from them reducing their quality of life and setting into motion numerous negative personal effects Beck 2000

Deep Learning for Chest Radiographs Yashvi Chandola, Jitendra Virmani, H.S Bhadauria, Papendra Kumar, 2021-07-16 Deep Learning for Chest Radiographs enumerates different strategies implemented by the authors for designing an efficient convolution neural network based computer aided classification CAC system for binary classification of chest radiographs into Normal and Pneumonia Pneumonia is an infectious disease mostly caused by a bacteria or a virus The prime targets of this infectious disease are children below the age of 5 and adults above the age of 65 mostly due to their poor immunity and lower rates of recovery Globally pneumonia has prevalent footprints and kills more children as compared to any other immunity based disease causing up to 15% of child deaths per year especially in developing countries Out of all the available imaging modalities such as computed tomography radiography or X ray magnetic resonance imaging ultrasound and so on chest radiographs are most widely used for differential diagnosis between Normal and Pneumonia In the CAC system designs implemented in this book a total of 200 chest radiograph images consisting of 100 Normal images and 100 Pneumonia images have been used These chest radiographs are augmented using geometric transformations such as rotation translation and flipping to increase the size of the dataset for efficient training of the Convolutional Neural Networks CNNs A

total of 12 experiments were conducted for the binary classification of chest radiographs into Normal and Pneumonia It also includes in depth implementation strategies of exhaustive experimentation carried out using transfer learning based approaches with decision fusion deep feature extraction feature selection feature dimensionality reduction and machine learning based classifiers for implementation of end to end CNN based CAC system designs lightweight CNN based CAC system designs and hybrid CAC system designs for chest radiographs This book is a valuable resource for academicians researchers clinicians postgraduate and graduate students in medical imaging CAC computer aided diagnosis computer science and engineering electrical and electronics engineering biomedical engineering bioinformatics bioengineering and professionals from the IT industry Provides insights into the theory algorithms implementation and application of deep learning techniques for medical images such as transfer learning using pretrained CNNs series networks directed acyclic graph networks lightweight CNN models deep feature extraction and conventional machine learning approaches for feature selection feature dimensionality reduction and classification using support vector machine neuro fuzzy classifiers Covers the various augmentation techniques that can be used with medical images and the CNN based CAC system designs for binary classification of medical images focusing on chest radiographs Investigates the development of an optimal CAC system design with deep feature extraction and classification of chest radiographs by comparing the performance of 12 different CAC system designs
