

RASTER ANALYSIS

Spatial Data Models

- Classes of data are conceptual (can't be stored on a computer)
 - Discrete
 - Continuous
- Spatial data models are what are created when we actually store spatial data on a computer
 - The spatial data model determines how the data are structured, stored, processed, and analyzed in a GIS
 - Deciding which model to use is up to the individual and is part of the *Science of GIS*
- Two spatial data models:
 - Vector
 - raster

Raster vs. Vector

- Vector
 - World is empty except when occupied by objects with well-defined boundaries
 - World is modeled by a series of points, lines, and polygons
 - Discrete object (building, road)
- Raster
 - Continuously varying surfaces
 - Value at every point
 - World is modeled as a grid
 - Continuous field (elevation)

Conceptual Models of Space

- In many cases
 - Discrete objects are represented using a vector data model
 - Continuous fields are represented using a raster data model
- This is not always true, like everything in life, it's not black and white
