Geography Grade 10 November Exam Papers 2014:

A Regional Geography of the United States and Canada Lisa Benton-Short, John Rennie Short, Chris Mayda, 2018-07-25
Now in a thoroughly revised and updated edition this text offers a comprehensive examination of North America's physical and human geography weaving in the key themes of environment and sustainability throughout. The authors explore the challenges each region faces such as water shortages, climate change, increased migration and diversity, urbanization and continued economic changes. The book also highlights the positive actions that Americans and Canadians are taking to move toward a more sustainable future. New features in the second edition include sections on population, immigration and diversity and urban trends. Each chapter also features a case study that examines a national park representing natural and cultural heritage, how the region is coping with climate change, how geospatial technologies are applied to environmental challenges, iconic images and/or cultural festivals, urban sustainability, best practices and global connections and networks. Designed for ease of teaching and learning, the book features full color photographs and maps throughout. Chapter highlights lists of key terms, places and major cities for each chapter, discussion questions and a glossary. *Assessment in Geographical Education: An International Perspective* Theresa Bourke, Reece Mills, Rod Lane, 2022-02-27
In recent years there has been increased attention paid to the importance of assessment in Geographical Education, the chosen subject for this book. Assessment is an important tool for collecting information about student learning and for providing timely data to inform key stakeholders including students, teachers, parents and policymakers. To be effective, assessment needs to be valid, reliable and fair. Validity is about ensuring that we assess what we claim we are assessing. Reliability is about measuring performance and understanding in a consistent way. Without validity and reliability, assessment is unlikely to provide equitable opportunities for students to demonstrate what they know and can do. As geography educators, it is therefore important that we identify the core concepts and skills in geography that we want students to master. We need a clear understanding of what the progression of learning looks like for each concept and skill so we can develop fit-for-purpose assessments that track and improve student learning. While there is a substantial literature on evidence-based assessment in secondary school contexts, research exploring best practice assessment in geography is rare. This is a concern given the distinctive nature of geography and the important role of assessment in the learning process. This scholarly collection seeks to address this issue by connecting research in educational assessment with the domain of geography. The chapters are written by leading researchers in Geographical Education from across the globe. These chapters provide examples of innovation through the collective voices of geography teacher educator scholars from across Australia, USA, South Korea, Germany, Switzerland and Singapore. What unifies the work in this book is that each chapter focuses on a key feature of the discipline of geography, providing scholarly examples of evidence-based practices for assessing student's knowledge and skills. **South African national bibliography**, 1999.
