What Are Physical Properties of Matter?

We use one or more of our senses to identify an object. The properties we are sensing are the physical properties of the object. A **physical property** of matter can be detected and measured without making a new substance. If a new substance is made, a chemical property was measured. Chemical properties will be covered in the next section. 

There are many physical properties that can help you identify an object. Some physical properties are color, odor, texture, and shape. How could you identify a fruit as an apple? You would probably first look at its color and shape. Its odor and certainly its taste may confirm that the fruit is an apple.

Other physical properties of an object include its strength, flexibility, ability to conduct electricity, and magnetism. Some important examples of the physical properties of matter can be seen in the table below.

Physical Property	Description
Thermal conductivity	How heat moves through a substance
Ductility	The ability of substance to be pulled into wire
State	The physical form of matter (solid, liquid, or gas)
Malleability	The ability of a substance to be rolled into a shape
Solubility	The ability of a substance to dissolve
Density	How compact a substance is
Compressibility	The ability to be squeezed or pressed together

 STUDY TIP

Ask Questions Read this section slowly. In your science notebook, write questions that you have about this section. Underline all words you do not understand.

 READING CHECK

1. **Describe** What are physical properties?

Critical Thinking

1. **Applying Concepts** You are given two balls that are made from the same rubber. They are also the same size and color. One is hollow and one is solid. Give three physical properties that could be used to identify the ball that is solid.
