

4. PRE OPERATION CHECK

CAUTION: Be sure to check the generator on a level surface with the engine stopped.

1. Check the engine oil level.

CAUTION: Engine oil is a major factor affecting engine performance and service life. Non-detergent or vegetable oils are not recommended.

Use SAE 10W-40 grade oil, or an equivalent high-detergent, premium quality motor oil certified to meet or exceed U.S. Automobile Manufacturers' requirements for Service Classification SF or SF-2. (Motor oils classified SF or SF-2 will show this designation on the container.)

SAE 10W-40 is recommended for general, all temperature use. Other viscosities shown in the chart may be used when the average temperature in your area is within the indicated range.

Remove the oil filler cap, and wipe the dipstick with a clean rag. Check the oil level by inserting the dipstick in the filler hole without screwing it in. If the oil level is below the end of the dipstick, add oil to the top of the oil filler hole.

CAUTION: Running the engine with insufficient oil can cause serious engine damage.

1. Check the fuel level.

Use automotive gasoline with a pump octane number (ASTM) of 88 or higher, or a research octane number of 91 or higher may be used without restriction in minimizing combustion chamber deposits.

Never use an oil-gasoline mixture or dirty gasoline. Avoid getting dirt, dust or water in the fuel tank.

After refueling, be sure to tighten the fuel tank cap firmly.

Fuel tank capacity: 2.8+ (2.74 US gal)

CAUTION

- Do not use extremely flammable or volatile solvents such as kerosene, turpentine or mineral spirits near the engine or fuel tank.
- Do not use any oil or grease on the fuel tank or fuel lines.
- Do not overfill the tank and make sure the fuel tank cap is tightened properly after refueling.
- As much as 10% of the fuel added during refueling may be lost as vapor. This is normal. Make sure the tank is full before starting the engine.
