

Entering One-Variable Data

1. Press **2ND** **STAT** **1** **ENTER** to clear existing statistical data.
2. Key in each x value and press **ENTER**.
3. The display shows n , the number of statistical data values now accumulated.

Pressing **ENTER** actually enters two variables (why the previous negative because the value already in the Y-register is accumulated as the previous y for this reason, the calculator will perform linear regression and show you values based on y even when you have entered only x values in its past. If you have entered an unusual number of x and y values, the error occurs, but the results are obviously not meaningful).

To recall a value to the display immediately after it has been entered, press **2ND** **ENTER**.

Entering Two-Variable Data

If the data is in pairs of coordinates, enter first the dependent variable (the y variable of the pair) and press **ENTER**, and then enter the independent variable (the x variable of the pair) and press **ENTER**.

1. Press **2ND** **STAT** **1** **ENTER** to clear existing statistical data.
2. Key in the y value first and press **ENTER**.
3. Key in the corresponding x value and press **ENTER**.
4. The display shows n , the number of statistical data pairs you have accumulated.
5. Continue entering x , y pairs. n is updated with each entry.

To recall an x value to the display immediately after it has been entered, press **2ND** **ENTER**.

Correcting Errors in Data Entry

If you make a mistake when entering statistical data, delete the incorrect data and add the correct data. Even if only one value of an x , y pair is incorrect, you must delete and reenter both values.

To correct statistical data:

1. Review the incorrect data, and instead of pressing **ENTER** press **DEL** **ENTER**. This deletes the value(s) and decrements n .
2. Enter the correct value(s) using **ENTER**.

If the incorrect value was the most just entered, press **DEL** **ENTER** to remove them. Then press **DEL** **ENTER** to delete them. (This removes a value now off in the Y-register, and its variable was stored in the x or y registers.) After deleting the incorrect statistical data, **2ND** **ENTER** will display the value of Y-register in one x and show it's in line 1.

Examples

Key in the x , y values in the table, then make the corrections shown on the right.

Initial x , y	Corrected x , y
20, 4	20, 5
400, 4	40, 4

Keys	Display	Description
2ND STAT 1 ENTER		Clears existing statistical data.
4 ENTER 20 ENTER 4 ENTER	4.0000 1.0000	Enters the first new data pair.
4 ENTER 400 ENTER 4 ENTER	4.0000 2.0000	Display shows n , the number of data pairs you entered.
DEL ENTER	1.0000 400.0000	Brings back last x value.
DEL ENTER	0.0000	Last y is still in Y-register.
4 ENTER	1.0000	Deletes the last data pair.
4 ENTER 40 ENTER 4 ENTER	4.0000 0.0000	Reenters the last data pair.
DEL ENTER 4 ENTER 400 ENTER 4 ENTER	4.0000 1.0000	Deletes the first data pair.
