Human Legacy Modern Era Chapter 14:

Holt World History: Human Legacy Holt Rinehart & Winston, 2008 *Lucy's Legacy* Dr. Donald Johanson, Kate Wong, 2010-06-01 Lucy is a 3.2 million year old skeleton who has become the spokeswoman for human evolution. She is perhaps the best known and most studied fossil hominid of the twentieth century, the benchmark by which other discoveries of human ancestors are judged. From Lucy's Legacy In his New York Times bestseller *Lucy: The Beginnings of Humankind*, renowned paleoanthropologist Donald Johanson told the incredible story of his discovery of a partial female skeleton that revolutionized the study of human origins. Lucy literally changed our understanding of our world and who we come from. Since that dramatic find in 1974, there has been heated debate and most important, more groundbreaking discoveries that have further transformed our understanding of when and how humans evolved. In *Lucy's Legacy*, Johanson takes readers on a fascinating tour of the last three decades of study, the most exciting period of paleoanthropologic investigation thus far. In that time, Johanson and his colleagues have uncovered a total of 363 specimens of *Australopithecus afarensis*, Lucy's species, a transitional creature between apes and humans spanning 400,000 years. As a result, we now have a unique fossil record of one branch of our family tree, that family being humanity, a tree that is believed to date back a staggering 7 million years. Focusing on dramatic new fossil finds and breakthrough advances in DNA research, Johanson provides the latest answers that post-Lucy paleoanthropologists are finding to questions such as: How did *Homo sapiens* evolve? When and where did our species originate? What separates hominids from the apes? What was the nature of Neanderthal and modern human encounters? What mysteries about human evolution remain to be solved? Donald Johanson is a passionate guide on an extraordinary journey from the ancient landscape of Hadar, Ethiopia, where Lucy was unearthed, and where many other exciting fossil discoveries have since been made, to a seaside cave in South Africa that once sheltered early members of our own species, and many other significant sites. Thirty-five years after Lucy, Johanson continues to enthusiastically probe the origins of our species and what it means to be human. *A Concise History of Modern Europe* David S. Mason, 2018-06-15 Highlighting the most important events, ideas, and individuals that shaped modern Europe, this text provides a concise history of the continent from the Enlightenment to the present day, focusing on the causes and consequences of revolution, the origins and development of human rights and democracy, and issues of European identity and integration. *The World Before Us* Tom Higham, 2021-08-24 A fascinating investigation of the origin of humans based on incredible new discoveries and advanced scientific technology. Fifty thousand years ago, *Homo sapiens* was not the only species of humans in the world. There were also Neanderthals in what is now Europe, the Near East, and parts of Eurasia; *Hobbitus floresiensis* on the island of Flores in Indonesia; Denisovans in Siberia and eastern Eurasia; and *H. luzonensis* in the Philippines. Tom Higham investigates what we know about these other human species and explores what can be learned from the genetic links between them and us. He also looks at whether *H. erectus* may have survived into the period when our ancestors first moved into Southeast Asia. Filled with

thrilling tales of recent scientific discoveries this book offers an engaging synopsis of our current understanding of human origins and raises new and interesting possibilities particularly concerning what contact if any these other species might have had with us prior to their extinction *TechGenesis* Parker J.
