

Crankcase Filter Opening

After draining crankcase and removing old oil filter element, replace oil filter cap, pour 1 gallon of flushing agent into the crankcase, run the engine for a few moments, then drain.

Replacing Oil Filter.

Each time you replace the crankcase oil, install a new filter element (Part No. AA3668B). The element fits over a long stud. If the stud is bent out of center position, straighten it by tapping with a soft hammer. If the rubber gasket that seals the filter cap is damaged, oil will leak at the cap. Remove the old gasket and install a new one. Do not over-tighten.

NOTE: Filter elements should not be used more than 100 hours. Always keep replacements on hand. Exhaustive tests by John Deere engineers have proved that the John Deere replacement oil filter (AA3668B), supplied by your John Deere dealer, will prevent contamination for the longest operating period.

Filling Crankcase with New Oil.

After flushing agent has drained out thoroughly and a new oil filter element has been installed, remove the filter cap and pour new oil of the proper weight in filter opening, until the oil is up to the "FULL" level on the dip stick with cap resting on top

of pipe. (See pages 61 and 66.) Add one extra quart of oil to replace oil drained out when filter element was removed. This extra quart of oil will not run into the filter compartment until the engine starts. Total approximate crankcase capacity is 16 U. S. quarts.

Keeping a Record of Oil and Filter Changes.

For your convenience, an "Oil and Filter Change" sticker comes with each box of Genuine John Deere Oil Filter Elements. Affix the sticker to the tractor air cleaner and keep a record of oil and filter changes on the sticker.

CONVERTOR PUMP.

Remove the converter pump drain plug and drain the pump. See illustration on page 60.

SERVICING POWERSHAFT CLUTCH HOUSING.

The powershaft clutch should be drained, flushed, and refilled every 100 hours of powershaft operation. Since this period normally occurs at about the same time as 500 hours of tractor operation, instructions for servicing the clutch are given under "500-Hour Service," page 71.

CHECKING POWERSHAFT CLUTCH FOR PROPER ADJUSTMENT.

The powershaft clutch should be checked for proper adjustment (and

adjusted if necessary) at the end of each 100 hours of powershaft operation. For checking and adjusting instructions, see page 91.

SERVICING THE DEL. TRIBUTOR.

Remove distributor cover and put a trace of high-temperature grease on the breaker point cam.

At the same time, lubricate the felt pad in end of cam with two or three drops of light oil. **CAUTION:** Do not over-lubricate.

For lubrication of the distributor shaft, see page 74.

Points of Distributor Lubrication

CHECKING POWER STEERING OIL LEVEL.

If your tractor is equipped with power steering, every 100 hours of operation remove bottom plug located on top of grille, unscrew dip stick and note height of oil. If necessary, add new oil until its level comes up to the "FULL" mark on dip stick

with filter cap resting on top of filter opening. Use only genuine John Deere power steering oil.

Check vent plug in center of top of dip stick. If there is an accumulation

tion of dirt on plug, remove dirt with air hose or rinse in solvent. This porous plug allows breathing of power steering system.

LUBRICATING THE BRAKE PEDAL SHAFTS.

Service grease fitting on underside of each brake housing with pressure gun grease to prevent foot pedal from sticking.
